© Adam McBride and Archaeopress 2020

Cover illustrations: The dancing warriors on the Sutton Hoo helmet attest to the rich symbolic and ritual life of Anglo-Saxon society and the performative nature of Anglo-Saxon power. It is through this lens that we must view the Anglo-Saxon halls, as theatres for the performance of rituals of power (dancing warriors redrawn from Bruce-Mitford 1978; various Anglo-Saxon halls redrawn from Addyman and Leigh 1973; Hope-Taylor 1977; Millet and James 1983; Williams et al. 1985; Hinchliffe 1986; O'Brien and Miket 1991; Upex 2002; 2003; 2004; 2005; Kirby 2012; Thomas and Knox 2013; Tester et al. 2014; Brennan and Hamerow 2015; Thomas 2017).

# Contents

<b>List of Figures</b> .....	vii
<b>List of Tables</b> .....	xiii
<b>List of Graphs</b> .....	xiii
<b>Preface and Acknowledgements</b> .....	xv
<b>Chapter 1: Introduction</b> .....	1
1.1 The Great Hall Complexes .....	1
1.1.1 The Sites .....	1
1.1.2 The Extent of Fieldwork at the Great Hall Complexes .....	3
1.2 The Study of Great Hall Complexes .....	4
1.2.1 Yeaving and the Culture-Historical Paradigm .....	4
1.2.2 Cowdery's Down and the Growing Influence of Processual and Post-Processual Archaeology .....	21
1.2.3 Great Hall Complexes in the 21st Century .....	23
1.2.4 Key Themes and Unanswered Questions .....	24
1.3 Great Hall Complexes in Comparison and in Context .....	26
 <b>Part I: Great Hall Complexes in Comparison</b>	
<b>Chapter 2: The Characteristics and Functions of Great Hall Complexes</b> .....	27
2.1 The Built Environment .....	27
2.1.1 The Architecture .....	27
2.1.1.1 Building Forms .....	27
2.1.1.2 Foundations .....	27
2.1.1.3 Wall Types .....	30
2.1.1.4 External Raking Posts .....	32
2.1.1.5 Great Halls and the Anglo-Saxon Building Tradition .....	35
2.1.2 The Layout .....	35
2.1.2.1 The Central Precinct .....	35
2.1.2.2 The Associated Activity .....	39
2.1.2.3 Evidence for Planning .....	39
2.1.2.4 Variation in Layouts .....	44
2.2 The Cultural and Physical Landscape .....	48
2.2.1 The Physical Landscape .....	48
2.2.2 The Cultural Landscape .....	48
2.2.2.1 The Local Scale .....	48
2.2.2.2 The Regional and Supra-Regional Scale .....	48
2.3 The Material Culture .....	50
2.3.1 The Material Culture of the Central Precinct .....	50
2.3.2 The Material Culture of Associated Activity .....	51
2.4 Dating Evidence .....	56
2.5 Great Hall Complexes and Kingship .....	59
2.5.1 Peripatetic Kingship .....	59
2.6 Ritual and Cult Activity at Great Hall Complexes .....	60
2.6.1 Special Deposits .....	60
2.6.2 Cult Structures .....	60
2.6.3 Prehistoric Monuments .....	66
2.6.4 Standing Posts .....	67
2.6.5 Burial .....	67
2.7 Craft-working, Agriculture and Exchange at Great Hall Complexes .....	73
2.7.1 Craft-working .....	73
2.7.2 Agricultural Production and Collection .....	73
2.7.3 Exchange .....	78
2.8 Variation among Great Hall Complexes .....	78

2.8.1 Variation in the Documented Terms for Great Hall Complexes.....	78
2.8.2 Variation in the Archaeology of Great Hall Complexes.....	83
2.8.2.1 Variation in Overall Size.....	83
2.8.2.2 Variation in Layout.....	86
2.8.2.3 Variation in Great Halls.....	88
2.8.3 Great Hall Complexes and Minor Hall Complexes.....	91
<b>Chapter 3: The Emergence, Development and Obsolescence of Great Hall Complexes.....</b>	<b>99</b>
3.1 The Emergence of the Great Hall Complexes.....	99
3.1.1 The Antecedents of the Great Hall Complexes.....	99
3.1.1.1 Great Hall Complexes and the Appropriation of the Public Assembly.....	102
3.1.1.2 The Origins of the Minor Hall Complexes.....	103
3.1.2 The Emergence of the Great Hall Architectural Style.....	107
3.1.3 The Cultural Context of the Anglo-Saxon Hall.....	109
3.1.3.1 Yeavinger and the Question of British Influence.....	110
3.1.3.2 The Scandinavian Halls.....	114
3.1.3.3 A Northern European Hall Culture.....	114
3.1.3.4 The Romanized Hall.....	114
3.1.3.5 Great Hall Complexes on the Periphery: the Distribution of Great Hall Complexes within Anglo-Saxon England.....	117
3.2 The Early Development of Great Hall Complexes.....	117
3.2.1 The Development of Wall Types.....	119
3.3 The Later Development of Great Hall Complexes.....	124
3.3.1 New Wall Types.....	124
3.3.2 New Building Forms.....	128
3.3.3 New Layouts.....	131
3.3.4 New Diversification.....	135
3.3.4.1 The Later Development of Minor Hall Complexes.....	135
3.3.5 The New Architectural Style and the Development of Power.....	139
3.3.5.1 The Decline of Public Space at High Status Sites.....	139
3.3.5.2 Christianity and the Relationship between Public Assembly, Cult and Kingship.....	142
3.3.5.3 Shifting Priorities: from the Public Assembly to the Means of Production.....	143
3.3.5.4 The Development of Complex Settlement Hierarchies.....	144
3.4 The Abandonment of the Great Hall Complexes.....	144

## Part II: Great Hall Complexes in Context

<b>Power and Place in the Upper Thames Valley.....</b>	<b>147</b>
A Regional Case Study.....	147
The Upper Thames Valley.....	147
Power and Place.....	148
<b>Chapter 4: Burial Methodology.....</b>	<b>151</b>
4.1 The Aims.....	151
4.2 The Methodology.....	151
4.2.1 The Cemeteries Data.....	151
4.2.1.1 The Sources and Typology.....	151
4.2.1.2 The Cemeteries.....	151
4.2.2 The Chronology.....	151
4.2.2.1 Phasing.....	151
4.2.2.2 Dating.....	153
4.2.2.3 Mercian Hegemony and the Retreat of Wessex.....	153
4.2.2.4 Roman Influences.....	153
4.2.3 The Four Metrics of Socio-Economic Power.....	153
4.2.3.1 The Distribution of Burials.....	153
4.2.3.1.1 Kernel Density.....	154
4.2.3.2 Average Quantified Burial Wealth.....	154
4.2.3.2.1 The Sample.....	154
4.2.3.2.2 Gender.....	154

4.2.3.2.3 The Weighted Artefact Count .....	154
4.2.3.2.4 The Average Weighted Artefact Count .....	155
4.2.3.2.5 Normalization.....	156
4.2.3.2.6 Kernel Density .....	158
4.2.3.3 The Distribution of High Status Artefacts .....	159
4.2.3.4 Individual Quantified Burial Wealth .....	160
4.2.3.4.1 The Wealthiest Burials .....	160
4.2.3.4.2 The Concentration of Burial Wealth in the Wealthiest and Poorest 10% of Burials .....	160
4.2.4 Methodological Limitations.....	160
4.2.4.1 Poorly Recorded and Incomplete Assemblages.....	160
4.2.4.2 Quantity versus Quality.....	161
4.2.4.3 The Proportion of Gendered Burials .....	161
4.2.4.4 Unrepresentative Samples.....	162
4.2.4.5 Imbalances in the Number of Male and Female Burial Sites.....	163
4.2.4.6 Burial Sites and Proximity to their Burying Communities.....	163
<b>Chapter 5: Power in Burial.....</b>	<b>164</b>
5.1 The Distribution of Burials.....	164
5.1.1 The Long Sixth Century.....	164
5.1.1.1 Cemetery Size in the Long Sixth Century .....	164
5.1.1.1.1 Alpha Cemeteries .....	164
5.1.1.1.2 Beta Cemeteries.....	164
5.1.1.1.3 Gamma Cemeteries .....	168
5.1.1.1.4 Delta Cemeteries .....	169
5.1.1.2 The Distribution of Burials in the Upper Thames Valley.....	169
5.1.1.3 Conclusions .....	170
5.1.2 The Mid-Seventh Century.....	172
5.1.2.1 Cemetery Size in the Mid-Seventh Century.....	172
5.1.2.1.1 Alpha Cemeteries .....	174
5.1.2.1.2 Gamma Cemeteries .....	174
5.1.2.1.3 Delta Cemeteries .....	175
5.1.2.1.4 Isolated Burials.....	175
5.1.2.2 The Distribution of Burials in the Upper Thames Valley.....	175
5.1.2.3 Core Areas, Isolated Burials and Supra-Local Communities .....	175
5.1.2.4 Conclusions .....	183
5.2 The Distribution of Burial Wealth.....	185
5.2.1 The Long Sixth Century.....	185
5.2.1.1 Average Female Burial Wealth.....	185
5.2.1.2 Average Male Burial Wealth .....	187
5.2.1.3 Normalized Average Male and Female Burial Wealth .....	187
5.2.1.4 Normalized Average Artefact Count and Cemetery Size .....	187
5.2.1.5 Normalized Average Artefact Count and Cemetery Location .....	191
5.2.1.6 The Spatial Distribution of Quantified Burial Wealth .....	191
5.2.1.7 The Distribution of High Status Artefacts .....	193
5.2.1.8 Individual Quantified Burial Wealth .....	194
5.2.1.8.1 The Concentration of Burial Wealth in the Wealthiest and Poorest 10% of Burials .....	195
5.2.1.8.2 The Wealthiest Burials .....	197
5.2.1.9 Conclusions .....	197
5.2.2 The Long Sixth Century by Period.....	200
5.2.2.1 AD 475-530 to AD 530-580 .....	200
5.2.2.2 AD 580-630.....	201
5.2.2.3 Conclusions .....	209
5.2.3 The Mid-Seventh Century .....	211
5.2.3.1 Average Female Burial Wealth.....	211
5.2.3.2 Average Male Burial Wealth .....	212
5.2.3.3 Normalized Average Male and Female Burial Wealth .....	214
5.2.3.4 The Wealthiest Burials.....	215
5.2.3.5 The Distribution of High Status Artefacts.....	216

5.2.3.6 A Holistic Ranking of Final Phase Burial Wealth.....	217
5.2.3.7 The Spatial Distribution of Burial Wealth .....	218
5.2.3.8 Conclusions .....	219
5.3 The Development of Socio-Economic Power in Burial .....	219
5.3.1 Power in Numbers .....	219
5.3.2 The Formation of Supra-Local Socio-Political Units.....	220
5.3.3 The Expansion and Consolidation of the West Saxon/Gewissan Kingdom.....	221
<b>Chapter 6: Settlement Methodology.....</b>	<b>223</b>
6.1 The Aims.....	223
6.2 The Methodology.....	223
6.2.1 The Settlements Data.....	223
6.2.1.1 The Sources .....	223
6.2.1.2 The Settlement Sites.....	223
6.2.2 The Chronology .....	223
6.2.2.1 Dating.....	223
6.2.2.2 Phasing.....	225
6.2.3 The Two Metrics of Socio-Economic Power .....	225
6.2.3.1 The Distribution of Settlement Activity .....	225
6.2.3.1.1 The Distribution of All Excavated Settlement Sites .....	225
6.2.3.1.2 The Distribution of Excavated Sunken-Feature Buildings.....	225
6.2.3.1.3 The Distribution of Excavated Earthfast Buildings .....	225
6.2.3.1.4 The Distribution of Unexcavated Settlement Sites .....	225
6.2.3.2 High Status Settlements.....	226
6.2.4 Methodological Limitations.....	226
6.2.4.1 The Distribution of Anglo-Saxon Material Culture.....	226
<b>Chapter 7: Power in Settlement.....</b>	<b>227</b>
7.1 The Distribution of Settlement Activity .....	227
7.1.1 The Distribution of All Excavated Settlement Sites .....	227
7.1.2 The Distribution of Excavated Sunken-Feature Buildings .....	227
7.1.3 The Distribution of Excavated Earthfast Buildings.....	231
7.1.4 The Distribution of Unexcavated Settlement Sites.....	232
7.1.4.1 Factors Affecting the Distribution of Excavated Settlement Sites .....	232
7.1.4.2 The Distribution of Cropmark Settlement Sites.....	233
7.1.5 Chronological Change in the Distribution of Anglo-Saxon Settlement.....	234
7.1.6 Comparing the Distribution of Settlements and Burials.....	238
7.1.7 Conclusions.....	240
7.2 High Status Settlements .....	242
7.2.1 Sutton Courtenay .....	243
7.2.1.1 The Built Environment.....	243
7.2.1.2 The Wider Site .....	246
7.2.1.3 Material Culture and Craft-Working .....	246
7.2.1.4 Ritual Activity .....	248
7.2.1.5 Chronology and Development.....	250
7.2.2 Long Wittenham.....	251
7.2.2.1 The Built Environment.....	251
7.2.2.2 The Wider Site .....	251
7.2.2.3 Material Culture and Craft-Working .....	255
7.2.2.4 Ritual Activity .....	255
7.2.2.5 Chronology and Development.....	256
7.2.3 Worton .....	257
7.2.3.1 The Built Environment.....	257
7.2.3.2 The Wider Site .....	257
7.2.3.3 Chronology and Development.....	257
7.2.4 Benson.....	261
7.2.4.1 The Built Environment.....	261
7.2.4.2 The Wider Site .....	261
7.2.4.3 Chronology and Development.....	265

7.2.5 Dorchester and Bishop's Court.....	265
7.2.5.1 The Built Environment.....	265
7.2.5.2 Dorchester, Bishop's Court and the Wider Site .....	268
7.2.5.3 Material Culture and Craft-Working.....	268
7.2.5.4 Chronology and Development.....	269
7.2.6 Aylesbury .....	271
7.2.6.1 The Built Environment.....	271
7.2.6.2 The Wider Site .....	271
7.2.6.3 Material Culture and Craft-Working.....	271
7.2.6.4 Chronology and Development.....	273
7.2.7 Eynsham Abbey.....	274
7.2.8 Yarnton .....	274
7.2.9 Fairford, Horcott Quarry .....	274
7.2.10 Lower Slaughter.....	275
7.2.11 Other Possible High Status Settlements .....	276
7.2.11.1 Sunningwell .....	276
7.2.11.2 Cresswell Field .....	276
7.2.11.3 Latton Quarry.....	277
7.2.11.4 Lechlade, Sherborne House .....	280
7.2.11.5 Wantage, Mill Street .....	280
7.2.11.6 Other Possible Ditched Enclosures .....	280
7.2.11.7 Shakenoak .....	281
7.2.11.8 Swindon .....	281
7.2.11.9 Purwell Farm.....	281
7.2.11.10 Barton Court Farm .....	281
7.2.11.11 New Wintles Farm.....	282
7.2.11.12 Black Bourton .....	282
7.2.12 High Status Settlements and the Development of the Settlement Hierarchy.....	282
7.2.12.1 The First High Status Settlements.....	282
7.2.12.2 The Expansion of the Settlement Hierarchy.....	285
<b>Chapter 8: Great Hall Complexes in Context.....</b>	<b>286</b>
8.1 The Emergence of Supra-Local Socio-Political Units.....	286
8.1.1 The First Supra-Local Socio-Political Units in the Upper Thames Valley.....	286
8.1.2 Supra-Local Socio-Political Units and the Development of Socio-Economic Power .....	287
8.1.2.1 The Distribution of Socio-Economic Power in the Sixth Century .....	287
8.1.2.2 The Concentration of Power and the Emergence of Supra-Local Socio-Political Units .....	288
8.1.3 Corporate Power, Assembly and the Formation of Supra-Local Socio-Political Units .....	290
8.1.3.1 Corporate Power and Supra-Local Socio-Political Units.....	290
8.1.3.2 Supra-Local Socio-Political Units and Supra-Local Assemblies.....	291
8.2 Great Hall Complexes and the Emergence of Supra-Regional Kingdoms.....	292
8.2.1 The Gewisse and the Emergence of Supra-Regional Hegemony .....	292
8.2.1.1 Supra-Local Socio-Political Units and the Emergence of Supra-Regional Hegemony.....	293
8.2.2 Great Hall Complexes and the Consolidation of Power .....	293
8.2.3 Long Wittenham, Dorchester and the Beginnings of the Settlement Hierarchy .....	295
8.2.4 Supra-Local Burials and the Expansion of the Gewissan Heartland .....	296
8.3 The Development of the Settlement Hierarchy and the Obsolescence of the Great Hall Complexes.....	297
8.3.1 The Mercian Conquest.....	299
8.3.2 The Development of the Settlement Hierarchy.....	299
8.3.3 The Dissemination and Degeneration of the Great Hall Architectural Style.....	299
8.3.4 The Dissemination, Degeneration, Obsolescence and Abandonment of the Great Hall Complex Phenomenon .....	300
<b>Appendix 1: The Cemeteries .....</b>	<b>306</b>
1.1 The Cemeteries of the Long Sixth Century.....	306
1.2 The Cemeteries of the Mid-Seventh Century.....	312
<b>Appendix 2: The Burials Methodology.....</b>	<b>316</b>
2.1 Phasing .....	316

2.1.1 The Allocation of Burials to Phases .....	316
2.1.2 Exclusive Period AD 580-630 (Phases D-E).....	316
2.1.3 Episodes B-C, C-D, and D-E .....	316
2.2 The Re-Dating of Male Artefacts .....	316
2.3 Age Determination .....	319
2.4 Defining the Anglo-Saxon Gendered Burial Rite .....	319
2.4.1 Female Gender in the Sixth Century .....	319
2.4.2 Female Gender in the Seventh Century .....	320
2.5 Artefact Types .....	320
2.6 Weighted Artefact Types .....	320
2.6.1 Weapons .....	320
2.6.2 Brooches.....	322
2.6.3 Medium Status Types.....	323
2.6.4 High Status Types .....	323
2.6.5 Highest Status Types.....	324
2.7 Kernel Density .....	324
2.8 Wealth Inequality in the Wealthiest and Poorest 10% of Burials.....	324
2.9 The Proportion of Gendered Burial .....	324
2.9.1 The Proportion of Gendered Burial in the Sixth Century .....	324
2.9.2 The Proportion of Gendered Burial in the Seventh Century.....	324

## Preface and Acknowledgements

This book is based on the doctoral research of the author, undertaken at the University of Oxford in 2014-2018 under the supervision of Helena Hamerow and examined by John Blair and Gabor Thomas in January 2019. In light of the examiners' comments, the submitted dissertation has been reworked for publication, resulting in the present volume.

On the one hand, this book is the product of a particular academic discipline – Anglo-Saxon history and archaeology – and it has been heavily influenced by the ideas and individuals within this field, most notably, Helena Hamerow and John Blair, but also Matt Austin, Andrew Holland, Faye Minter, Gordon Noble, Ian Ralston, Chris Scull, Sarah Semple, Cliff Sofield, Gabor Thomas, Abi Tompkins, Dries Tys, Roger White and Howard Williams, among others. On the other hand, however, this book has also been immeasurably shaped by the wider socio-cultural moment, by the upheaval and new ideas emerging in many academic disciplines and reshaping many societies around the world. In trying to make sense of these changes, the ideas presented in this book have benefitted immensely from a range of cross-disciplinary conversations with various colleagues at The Queen's College, especially Morganne Graves, Ross Spear, Jack Fitzsimons, Steph Carey, Julia Hamilton, Yongqi Wang, Max Lawton, Charlie Troup, Dan Iley-Williamson, Eleri Watson and Marina Lambrakis. And long before this research began, the ideas presented in this book were indelibly shaped by my upbringing, by my parents, Mary and Lee, by my trailblazing sister, Jessica, and by my *gesiths*, Joe, Tommy, Charlie, Zach, Oliver, Dave, Daniel and Patrick.

The author is also greatly indebted to the many people who made the Long Wittenham excavation possible: the landowners, the Earth Trust and Sylva Foundation, especially Gabriel Hemery, the drone photographer, Adam Stanford, and the entire field crew, Jane Harrison, Anni Byard, William Wintle, Cliff Sofield, Rob Wadley, Martin Baker, Mandy Bellamy, Rita Bevan, Catriona Brodribb, Michael Byard, Pat Day, Amanda Eames, Hannah Everett, Eleanor Farber, Natalie Garfinkle, Joshua Goldman, Fran Holmes, Jenni Laird, Christopher Lewis, Jenny Mann, Patricia Marsh, Patricia Maunder, Charlie McCarthy, Rob McLean, Ruth McLean, Leigh Mellor, Gill Mellor, Caroline Morrell, John Moughton, Greg Owen, Phil Price, Roelie Reed and Chris Turley, as well as the post-excavation crew, Sheila Raven, Ian Cartwright, Wendy Morrison, Priscilla Lange, Simon Blackmore, Pam England, Trevor Greer, Sheila Mclasley, Steve Nicholson, Fredericka Smith, Anne Spencer and Carole Walton.

Gratitude is also due to the keepers of the Wiltshire, Gloucestershire, Buckinghamshire and Oxfordshire HERs, especially David Moon of the Oxfordshire Museums Services, and also Sue Harrington, who generously shared her data from the Beyond the Tribal Hidage project.

Last but not least, this research would have never been possible were it not for the generous grants of the Clarendon Fund, the Cyril and Phillis Long Studentship, the Santander Graduate Award, the Meyerstein Fund, The Queen's College Academic Support Grant and the School of Archaeology Research Award. Most fundamentally, however, I must acknowledge the immense privilege that has enabled me to undertake this thesis. More than anything else, this book is a product of wealth and vast inequalities in its distribution – indeed, few things could have better prepared me for the study of Anglo-Saxon kingdom formation than a first-hand experience in the creation and reproduction of elite culture at the University of Oxford.

# Chapter 1

## Introduction

### 1.1 The Great Hall Complexes

The term ‘great hall complex’ describes a distinctive group of early Anglo-Saxon sites that exhibit a common architectural and spatial vocabulary, which was exceptional, monumental, ritualized and symbolic.

The architectural style of great hall complexes was characterized by large timber buildings with substantial post-in-trench foundations, elaborate wall types and external raking posts (Figure 1.1). The largest building at each site – the great hall – was at least 18 m long, and the smaller buildings at each site were typically 10-20 m long. The layouts of the great hall complexes were distinctively structured by consistent orientation schemes, linear and perpendicular alignments and focal elements, and the layout of each site appears to be a coherent, planned entity, in which each element was laid out in reference to the other elements (Figure 1.2).

Most great hall complexes have produced very little material culture, but great hall complexes are uniformly interpreted as high status sites. In most cases, great hall complexes are assumed to be royal sites, due in large part to the documented royal status of Yeavinger (Northum.) and Milfield (Northum.). Great hall complexes have also produced considerable evidence for ritual and cult activity, and a few great hall complexes have produced evidence of specialist craft-working and exchange.

As a group, great hall complexes are typically dated between the late 6th and the early 8th centuries. This dating corresponds to the emergence and early development of the Anglo-Saxon kingdoms, and great hall complexes are widely considered to be one of the earliest archaeological indicators of kingdom formation. This parallel chronology, between great hall complexes and kingdom formation, strongly suggests that the great hall complexes played a critical role in the emergence and early development of Anglo-Saxon kingdoms. However, the exact nature of this role remains uncertain. The further study of great hall complexes therefore holds significant potential for understanding kingdom formation in Anglo-Saxon England and for understanding the emergence and early development of kingdoms across human history. For these reasons, great hall complexes warrant significant further study.

#### 1.1.1 The Sites

This study has identified nineteen sites that exhibit the characteristics of great hall complexes (Figure 1.3). Of these sites, ten can be unequivocally called great hall complexes: Atcham (Shrops.), Cowage Farm (Wilts.), Cowdery’s Down (Hants.), Hatton Rock (Warks.), Long Itchington (Warks.), Lyminge (Kent), Milfield (Northum.), Sprouston (Scot. Bord.), Sutton Courtenay (Oxon.) and Yeavinger (Northum.). Each of these sites has produced evidence for at least two exceptionally large buildings arranged in a formalized layout.<sup>1</sup>

A further three sites – Rendlesham (Suff.), Eynsford (Kent) and Long Wittenham (Oxon.) – share strong similarities with these sites, but thus far, only one building has been identified at Rendlesham and Eynsford, and while Long Wittenham has produced evidence for several buildings arranged in a formalized layout, the buildings are relatively small when compared with the other sites.<sup>2</sup> Nevertheless, these three sites are assumed to be great hall complexes in Part I of this book, although the status of Long Wittenham is further interrogated in Part II.

Another group of four sites – Chalton (Hants.), Lockerbie (D.&G.), Polebrook (Northants.) and Thirlings (Northum.) – share certain characteristics with the great hall complexes, but their less formal layouts, smaller buildings and less robust construction methods differentiate these sites from the great hall complexes. In this book, these four sites are referred to as ‘minor’ hall complexes; ‘minor’ refers to the significant differences in scale and precision between these sites and the ‘great’ hall complexes, and this terminology avoids the interpretative baggage of terms like ‘thengly’ or ‘aristocratic’.

The sites at Dover (Kent) and Repton (Derbs.) also exhibit certain characteristics of the great hall complexes, but the interpretation of these sites is complicated by their ecclesiastical associations and by the circumstances of their excavation; the Dover buildings were heavily damaged by repeated rebuilding, and the Repton

<sup>1</sup> References for these sites are given below in Section 1.1.2.

<sup>2</sup> The site at Doon Hill (E. Loth.), previously believed to be an Anglo-Saxon great hall complex, has recently been re-dated by Ralston 2018; 2019 to the Neolithic, based on radiocarbon dates taken from archived charcoal samples, and in light of the Doon Hill re-dating, the sub-rectangular halls at Whitekirk (E. Loth.), identified in aerial photographs by Brown 1983, also look more at home in the Neolithic. As such, Doon Hill and Whitekirk are both excluded from this study. The author is grateful to Ian Ralston for discussing both of these sites.

Figure 1.1: The great hall, Building C12, at Cowdery's Down (reconstruction after Millett and James 1983: figure 71 © Royal Archaeological Institute, reprinted by permission of Taylor & Francis Ltd, <http://www.tandfonline.com> on behalf of Royal Archaeological Institute).

buildings are currently unpublished.<sup>3</sup> Several other possible great hall complexes are also identified in Part II of this book, but these sites are not discussed in Part I.

Twelve of the nineteen sites included in this study – Atcham, Cowage Farm, Hatton Rock, Long Itchington, Long Wittenham, Milfield, Polebrook, Rendlesham, Sprouston, Sutton Courtenay, Thirlings and Yeavinger – were discovered from aerial photography.<sup>4</sup> Only Chalton, Cowdery's Down, Dover, Eynsford, Lockerbie, Lyminge and Repton were discovered during excavation, and this suggests that there is a bias among the identified

<sup>3</sup> For Repton, see Blair 2005: 187; 2018: 131; Biddle and Kjolbye-Biddle 2012. For the debate over Dover, see Philp 2003: 58-72; Welch 2007: 203; Thomas and Knox 2013: 13; Blair 2018: 133; Thomas 2018: 274-86. Thomas 2018, in particular, makes a convincing case for reinterpreting Dover as a royal centre, similar to Lyminge; however, this book was largely complete when this article was published, and as such, Dover does not feature prominently in this study. Nevertheless, future discussions will hopefully take both Dover and Repton into account.

<sup>4</sup> The possible hall at Rendlesham was discovered from a combination of aerial photography and geophysics, but Scull *et al.* 2016: 1597 give the primary credit to aerial reconnaissance.

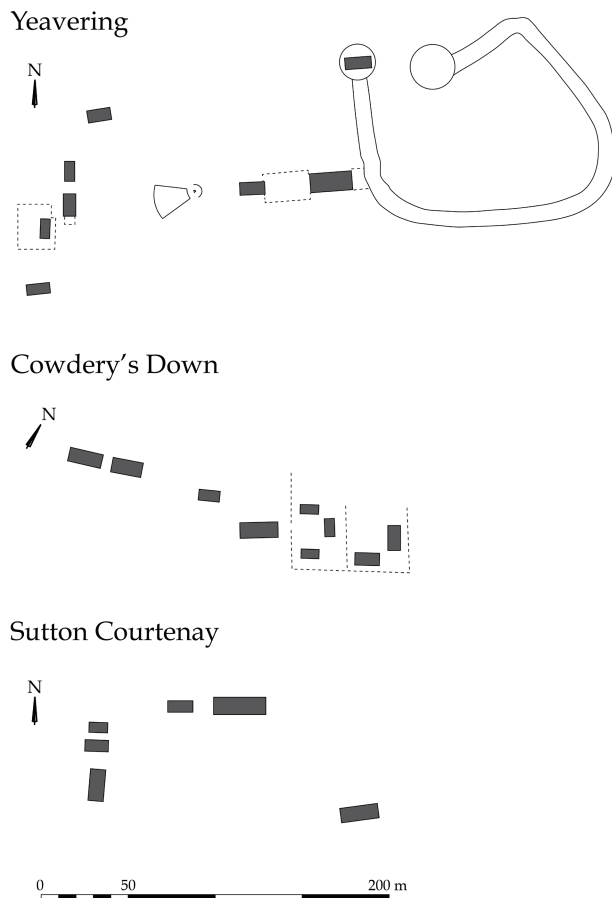

Figure 1.2: The distinctively structured layouts of Yeavinger (redrawn from Hope-Taylor 1977), Cowdery's Down (redrawn from Millett and James 1983) and Sutton Courtenay (redrawn from Booth *et al.* 2007; Hamerow *et al.* 2007; Wessex Archaeology 2010).

sites towards certain geologies and land uses that are conducive to aerial photography, particularly modern agricultural fields and freely draining gravel geology. Great hall complexes and minor hall complexes that are located on less conducive geologies and under modern towns or villages are less likely to be discovered, and when discovered, they are less likely to be identified as such, because their distinctive layout and monumental scale are often unclear in small-scale excavations, especially in urban situations.

### 1.1.2 The Extent of Fieldwork at the Great Hall Complexes

Yeavinger (Figure 1.4), Cowdery's Down (Figure 1.5) and Lyminge (Figure 1.6) have each been the subject of large-scale excavations.<sup>5</sup> However, the excavations at Lyminge are currently still in post-excavation, and although several interim reports are available, the final

<sup>5</sup> For Yeavinger, see Hope-Taylor 1977; Harding 1981; Tinniswood and Harding 1991. For Cowdery's Down, see Millett and James 1983. For Lyminge, see Thomas 2008; 2009; 2010; 2017; 2018; Thomas and Bray 2010; Thomas and Knox 2013; 2014; 2015.

report will no doubt add many details to the current picture.

Smaller scale excavations have been carried out at Cowage Farm (Figure 1.7), Sutton Courtenay (Figure 1.8), Eynsford (Figure 1.9), Rendlesham (Figure 1.10), Long Wittenham (Figure 1.11) and Atcham (Figure 1.12), and a watching brief was carried out at Hatton Rock when a pipe trench was cut across the site (Figure 1.13).<sup>6</sup> Large cemeteries have also been separately excavated at Milfield (Figure 1.14), Lyminge and Long Wittenham.<sup>7</sup>

Long Itchington (Figure 1.15), Sutton Courtenay, Rendlesham, Long Wittenham and Atcham have also been metal-detected,<sup>8</sup> and Hatton Rock, Milfield, Cowage Farm, Long Itchington, Sutton Courtenay, Rendlesham, Atcham and Long Wittenham have been subject to geophysical surveys.<sup>9</sup> However, the Hatton Rock and Milfield surveys did not return significant results, and the Long Itchington survey is unpublished and apparently lost.<sup>10</sup>

The site at Sprouston (Figure 1.16) is known almost exclusively from aerial photographs,<sup>11</sup> but 'hearths, and foundations of houses and kitchen utensils' were apparently ploughed up at Sprouston in the 1840s,<sup>12</sup> and the cropmarks at Sprouston are exceptionally clear, revealing post-built buildings and individual graves.<sup>13</sup>

The possible great hall complexes at Dover and Repton have been extensively excavated, but as previously mentioned, the Dover features are difficult to interpret (Figure 1.17), and the Repton excavation is currently unpublished (Figure 1.18). The minor hall complexes

## 1.2 The Study of Great Hall Complexes

### 1.2.1 Yeavinger and the Culture-Historical Paradigm

In 1949, the first great hall complexes were identified from aerial photographs at Yeavinger and interpreted as the seventh-century '*villae regiae*' recorded by Bede at *Ad Gefrin* (Yeavinger) and *Maelmin* (Milfield).<sup>15</sup> Soon afterward, in 1952, Yeavinger came under threat from quarrying, and rescue excavations

<sup>15</sup> Bede HE II: 14; Knowles and St Joseph 1952: 270-1; Hope-Taylor 1977: 1-5.

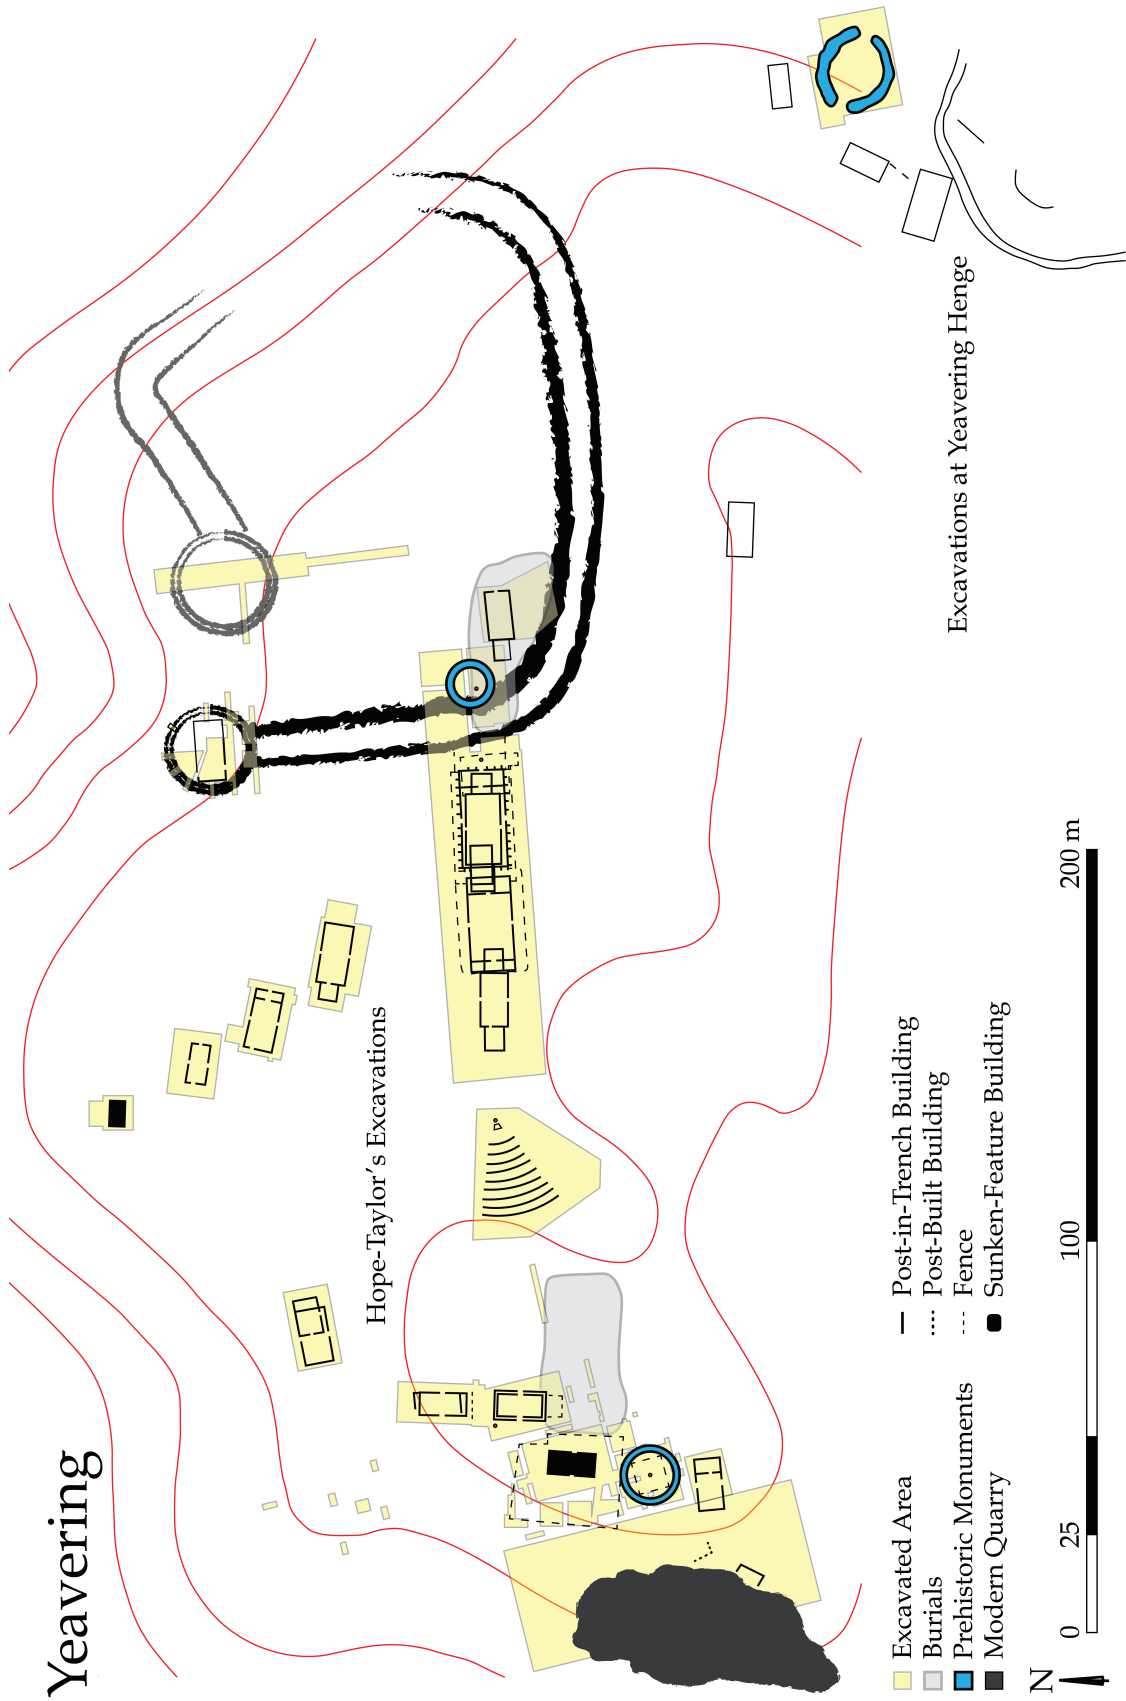

Figure 1.4: Brian Hope-Taylor's excavations at Yeaveering (redrawn from Hope-Taylor 1977) and the 1976 excavations at Yeaveering Henge (redrawn from Tinniswood and Harding 1991); due to discrepancies in the published plans, there may be inaccuracies in the placement and orientation of certain features, especially regarding the spatial relationship between Hope-Taylor's excavations and the Yeaveering Henge features (n.b. in this figure and throughout this book, the term 'post-built building' is used exclusively to describe buildings that were founded in individual postholes, as opposed to post-in-trench buildings).

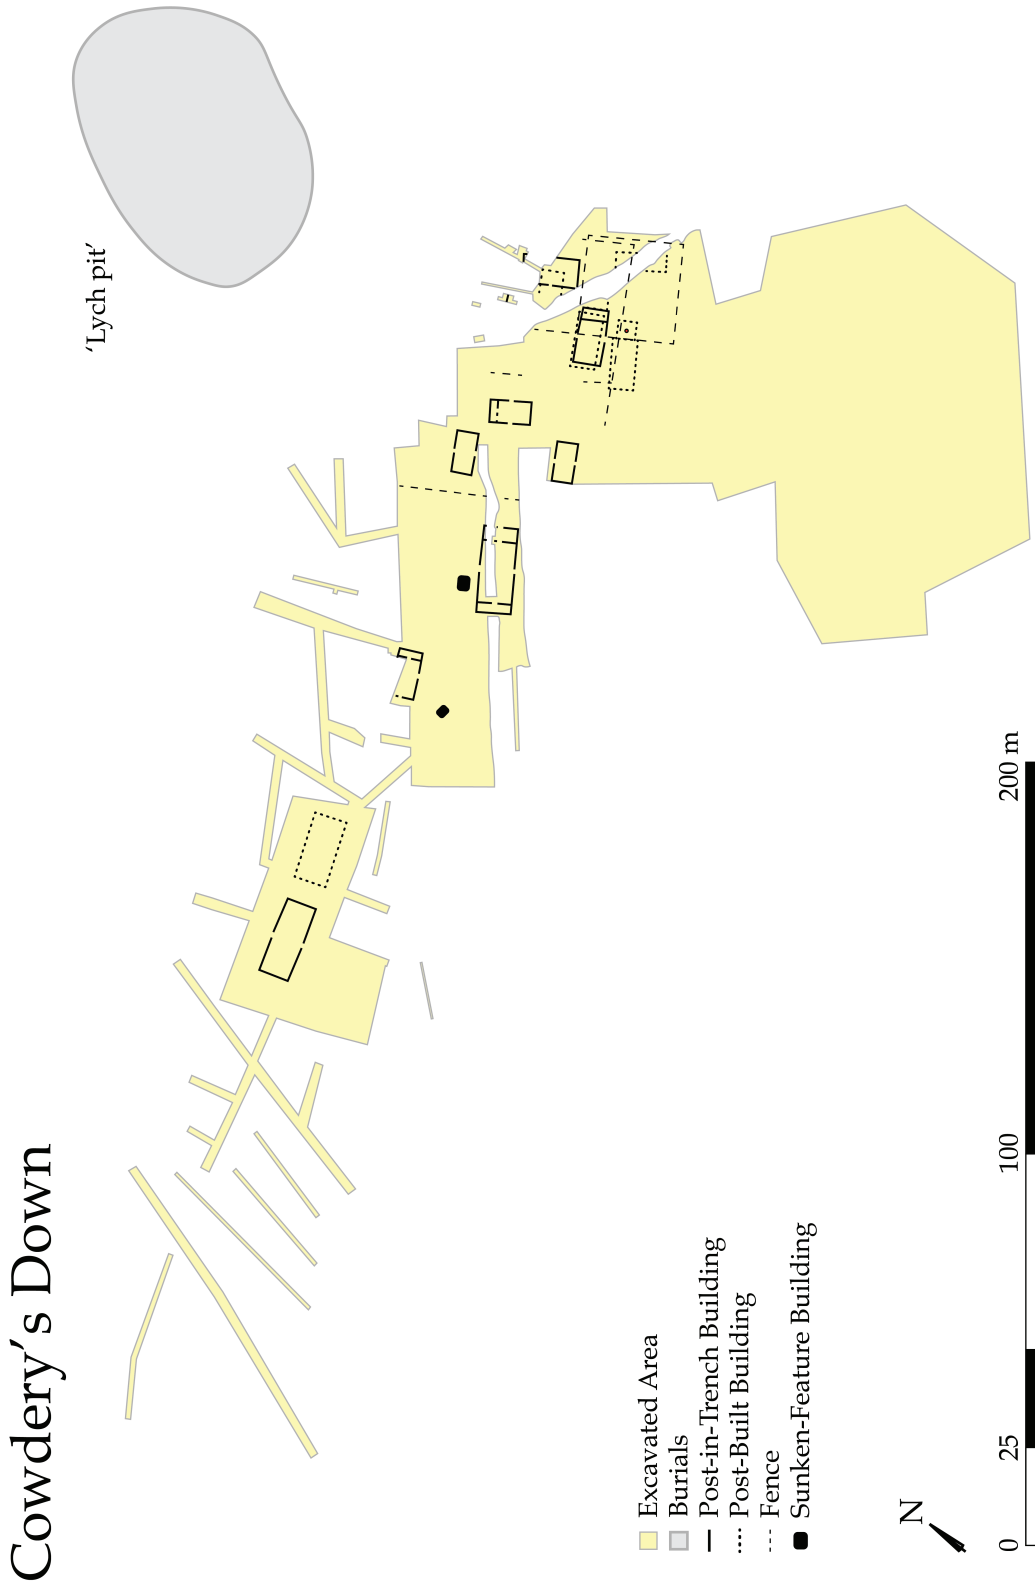

Figure 1.5: Martin Millett's excavations at Cowdery's Down (redrawn from Millett and James 1983). The nearby 'Lych pit' or 'corpse pit' recorded in AD 945 (S 505) may be an early Anglo-Saxon cemetery, or perhaps a hollow associated with dead or supernatural spirits (n.b. this figure and the following Figures 1.6-1.13 are depicted at the same scale as Figure 1.4).

# Lyminge

- Excavated Area
- Prehistoric Monuments
- Midden
- Post-in-Trench Building
- ⋯ Post-Built Building
- Sunken-Feature Building

Figure 1.6: Gabor Thomas' excavations at Lyminge (redrawn from Thomas 2017). Only the sixth- and seventh-century features are depicted in this plan; the eighth-century minster buildings are not included (Due to discrepancies in the currently available plans, there may be inaccuracies in the placement and orientation of certain features).

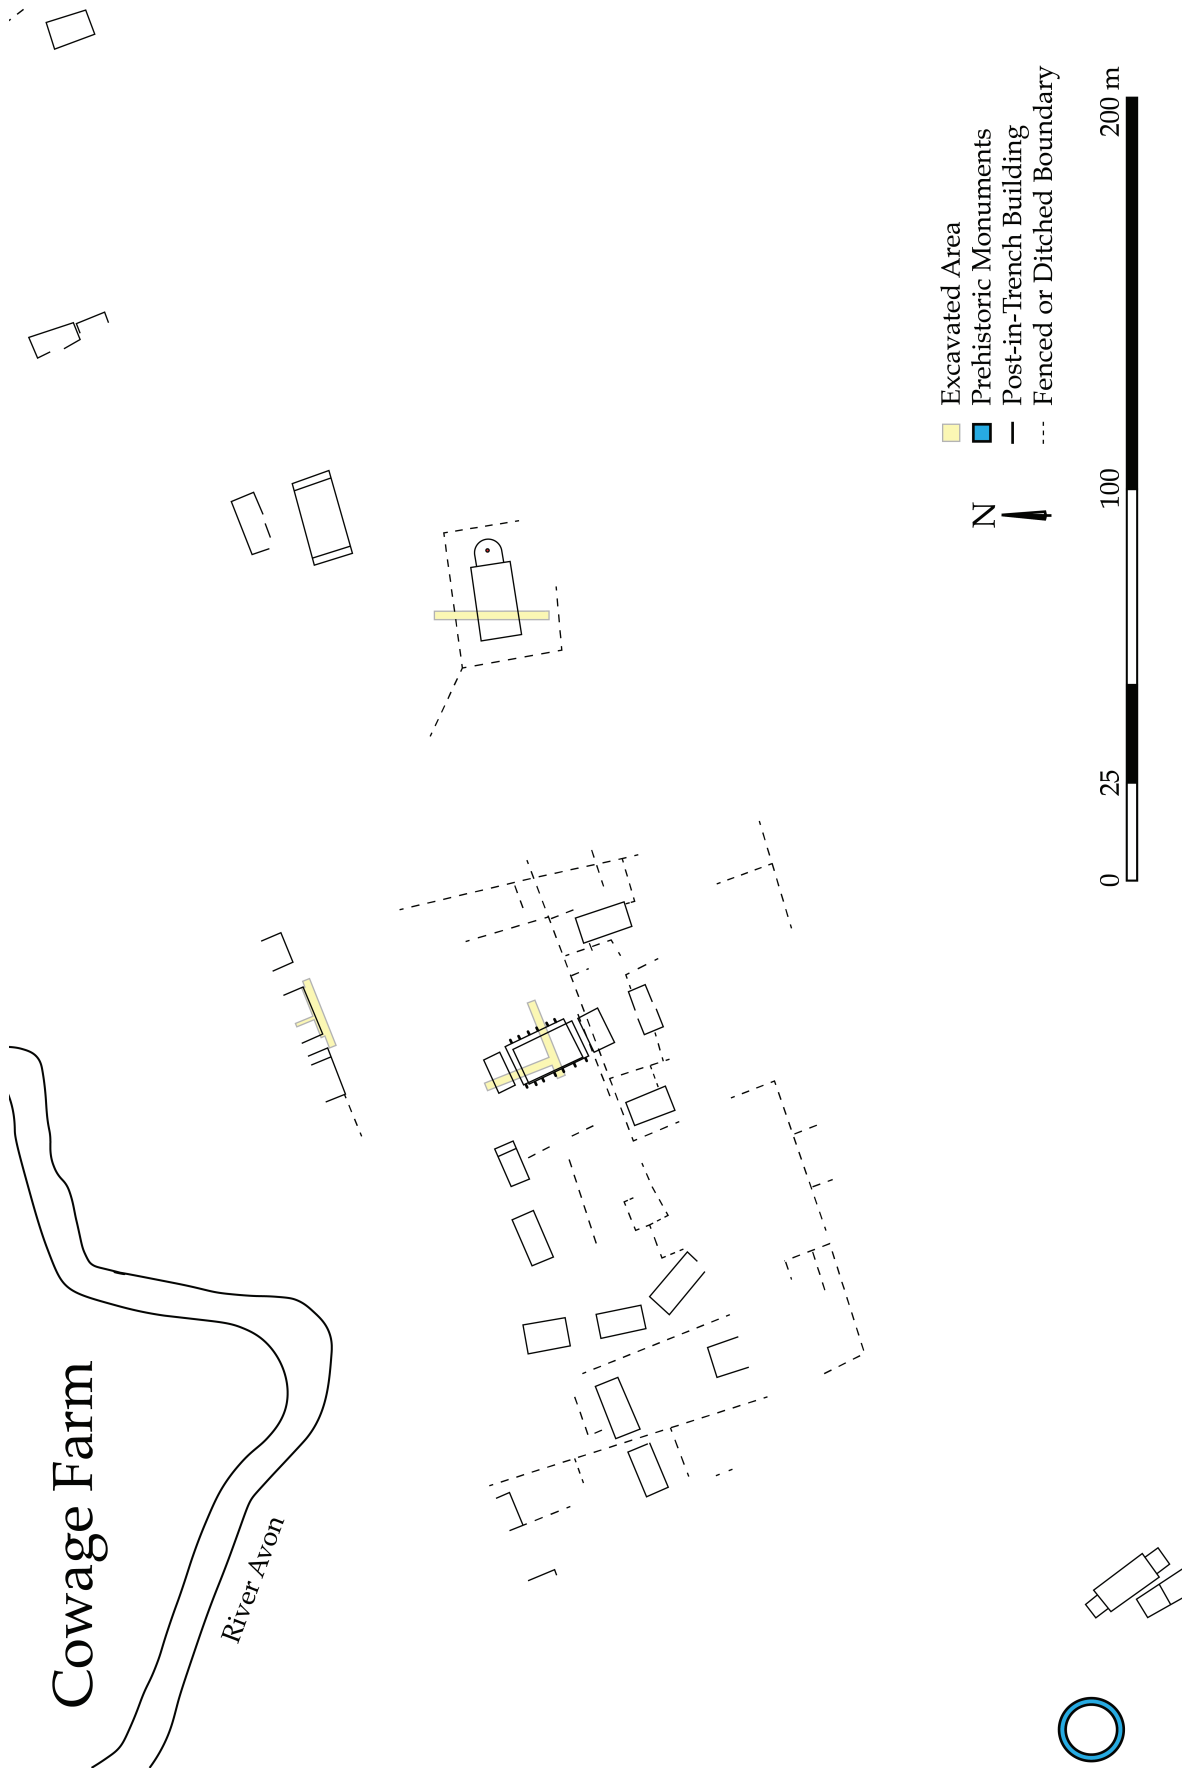

Figure 1.7: The cropmarks at Cowage Farm, partially excavated by John Hinchliffe in 1983 (redrawn from Hinchliffe 1986).

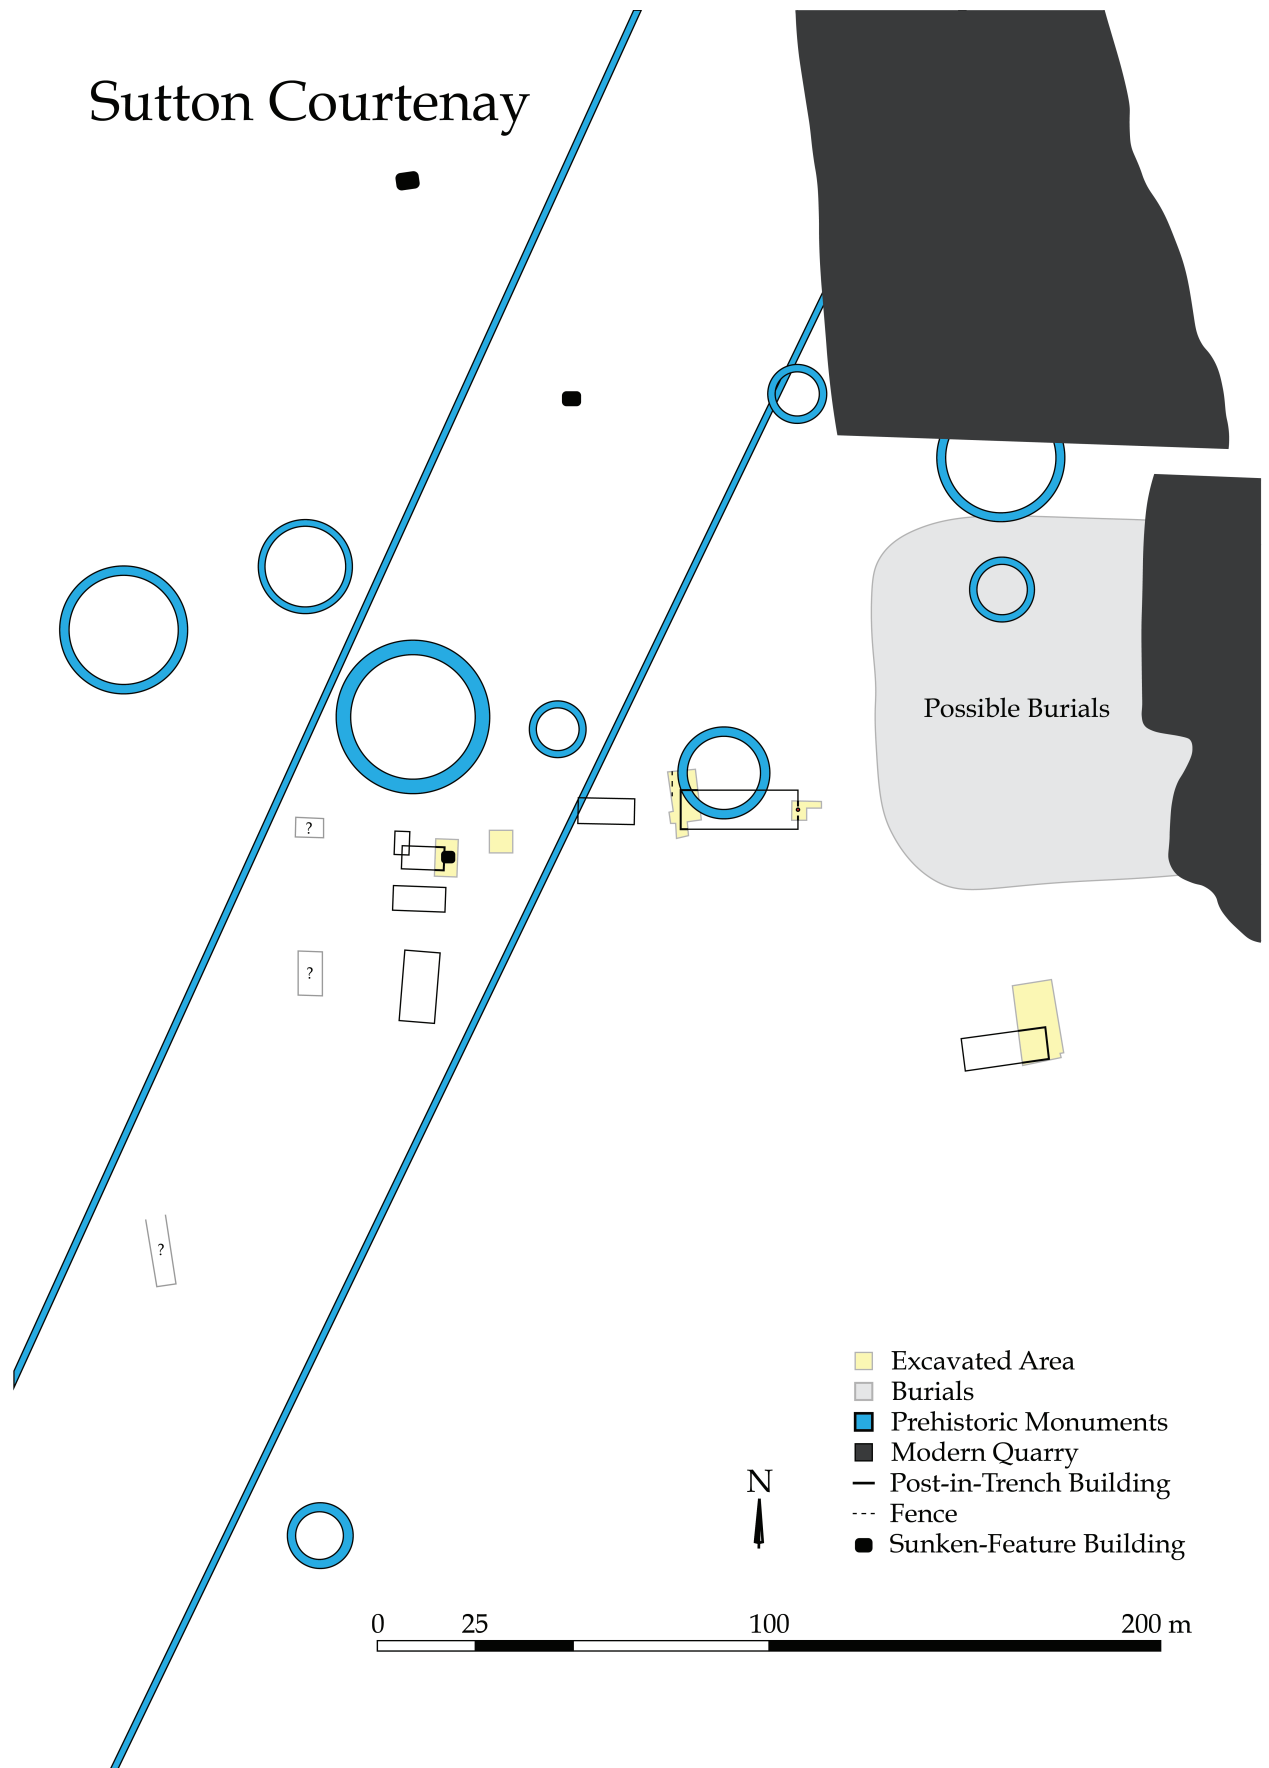

Figure 1.8: The cropmarks at Sutton Courtenay, partially excavated in 2001-2003 and 2010 (redrawn from Booth *et al.* 2007; Hamerow *et al.* 2007; Wessex Archaeology 2010) (Due to discrepancies between the different published plans, there may be inaccuracies in the placement and orientation of certain features).

# Eynsford

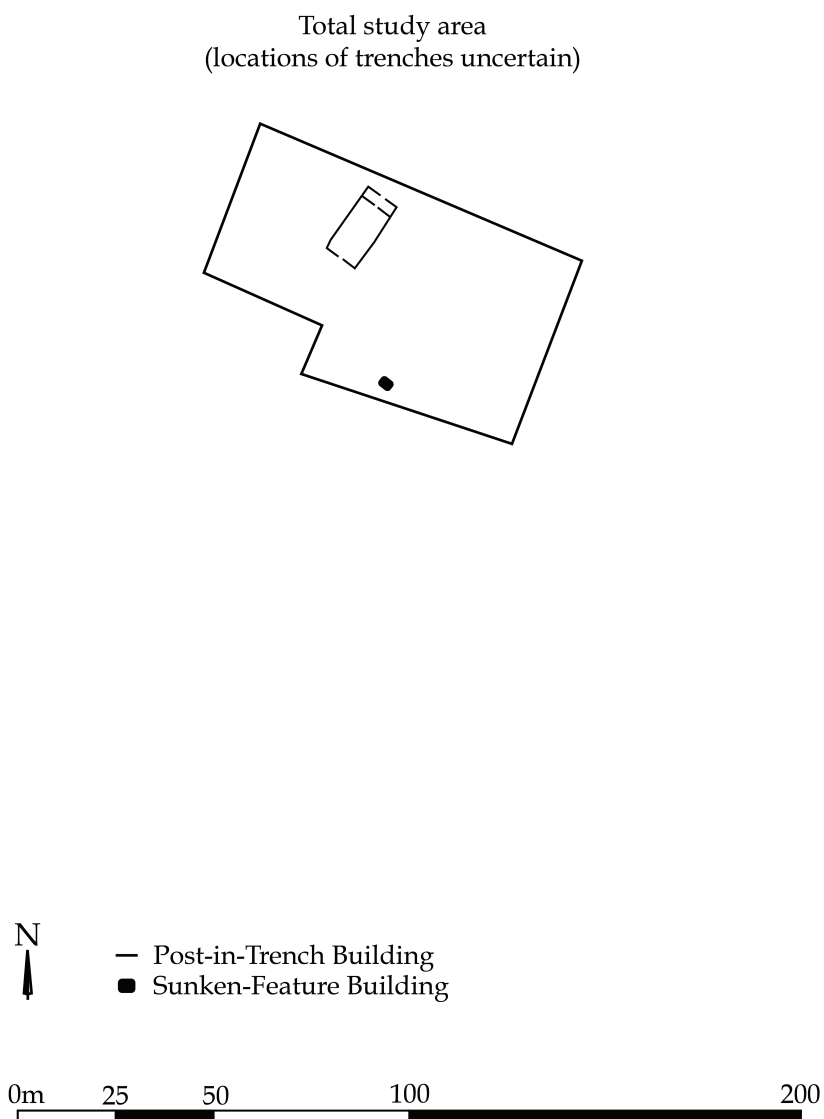

Figure 1.9: The Eynsford hall (redrawn from Philp 2014) (The exact location of the hall and sunken-feature building and the extent of the excavated area are not depicted in the published plans; the locations of these features have therefore been estimated from the description of the features' locations, relative to the total study area).

# Rendlesham

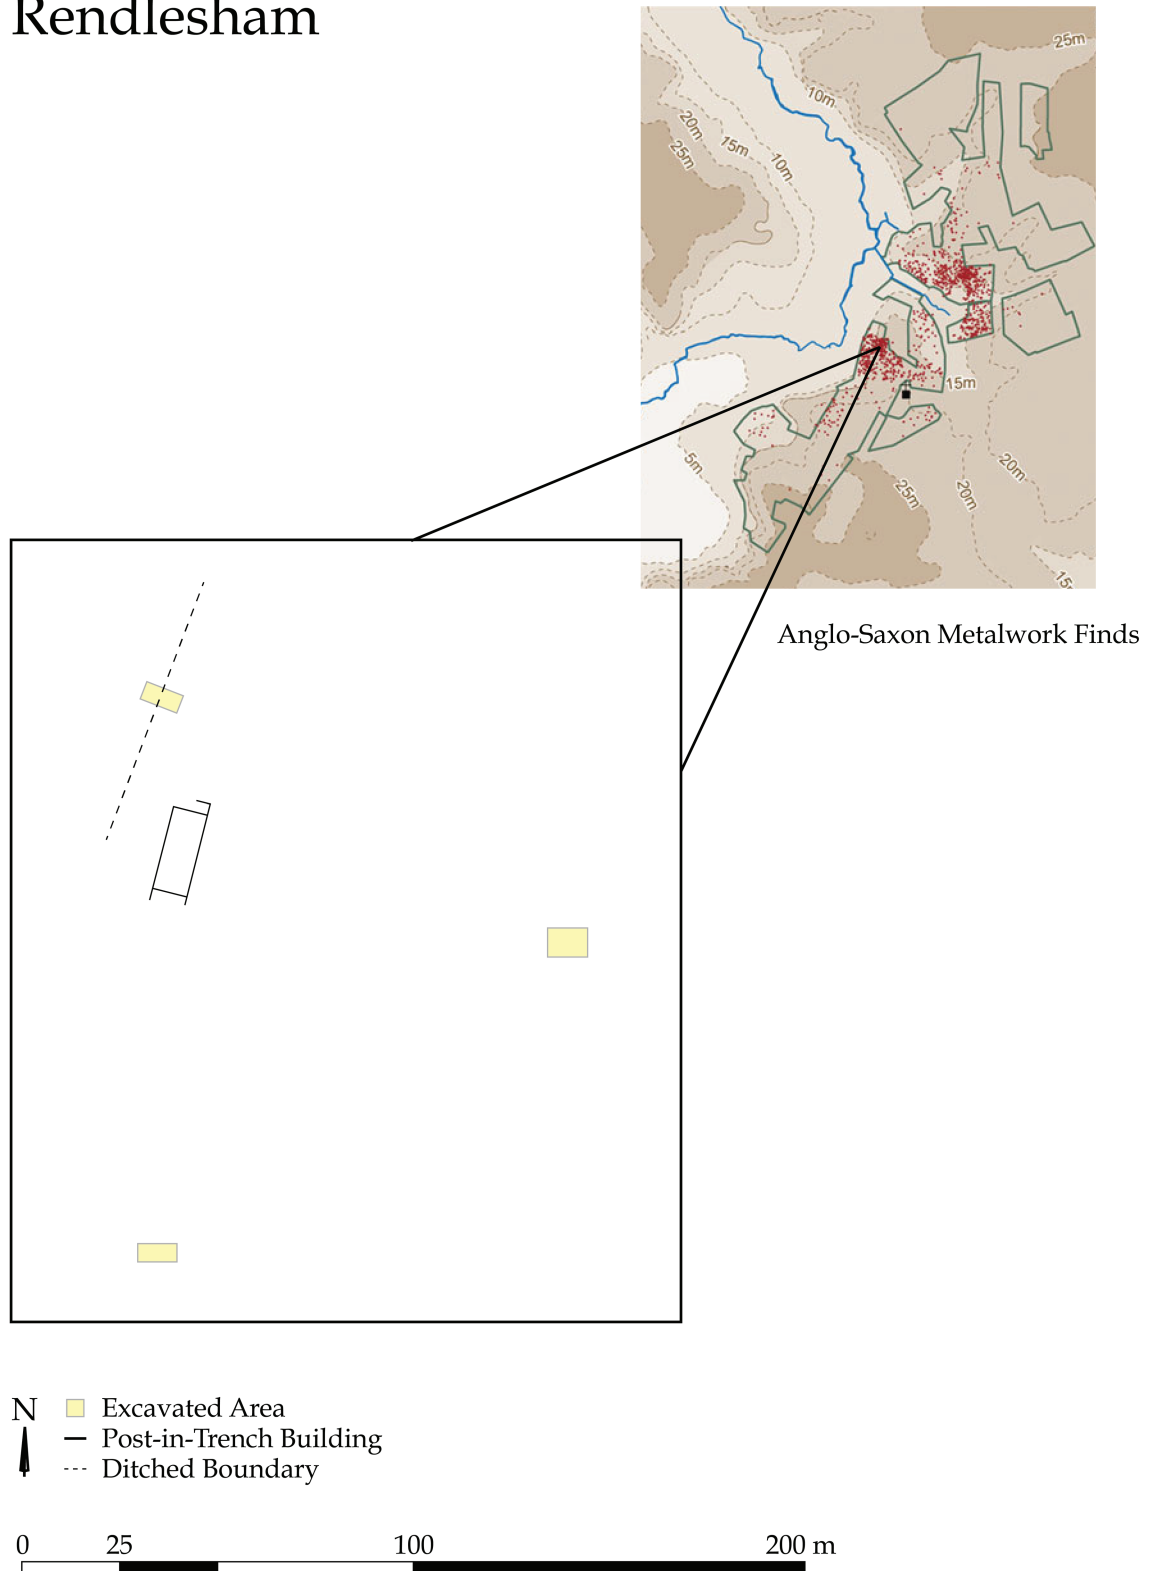

Figure 1.10: The great hall at Rendlesham, identified from aerial photographs and geophysical survey (after Scull *et al.* 2016; © Suffolk County Council). Metal-detecting and test-pitting have revealed strong evidence for high status Anglo-Saxon occupation, but the great hall has yet to be ground-truthed.

# Long Wittenham

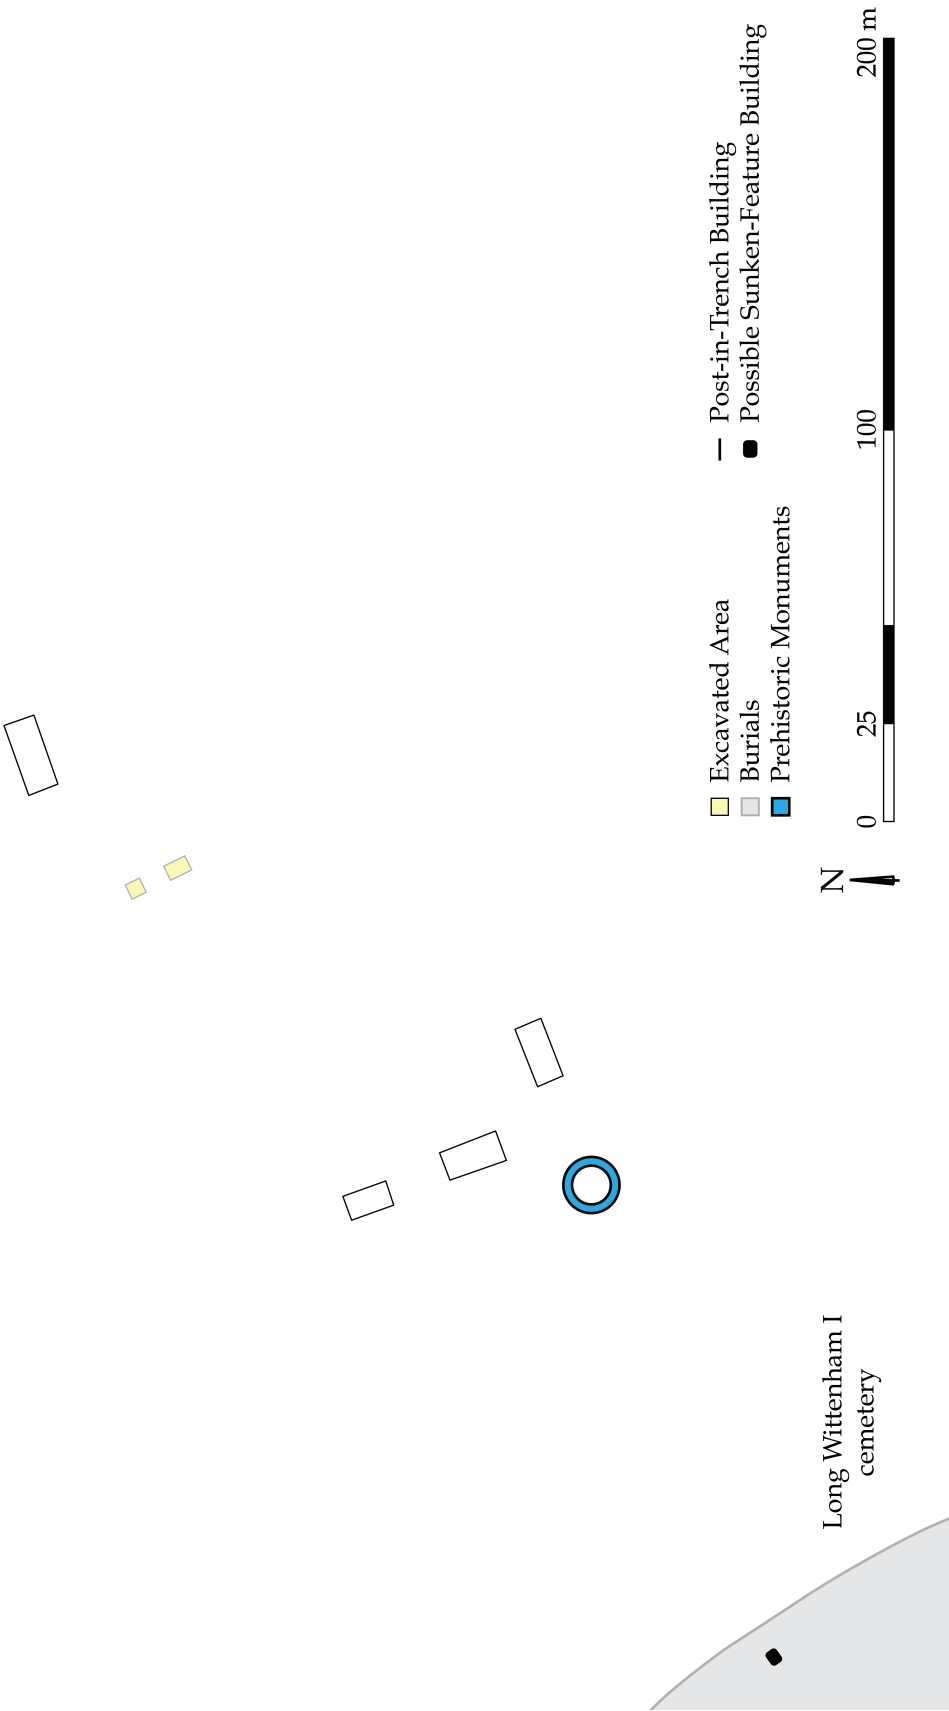

Figure 1.11: The recent excavations at Long Wittenham, undertaken by the author, in collaboration with Helena Hamerow and Jane Harrison. A sunken-feature building was also apparently excavated at the eastern edge of the Long Wittenham I cemetery in the 19th century (Hamerow *et al.* 2013: 63) (The exact location of this feature is unknown, however, and the location shown here is only approximate).

## Atcham

Figure 1.12: The great halls at Atcham, partially excavated by Roger White (redrawn from White and Young 2019). The cropmarks at Atcham are unusually irregular, and the buildings appear to be almost sub-rectangular, but aerial photographs can be misleading. Detailed plans of the excavation are not yet available, and it remains unclear if this irregularity will be borne out in excavation.

## Hatton Rock

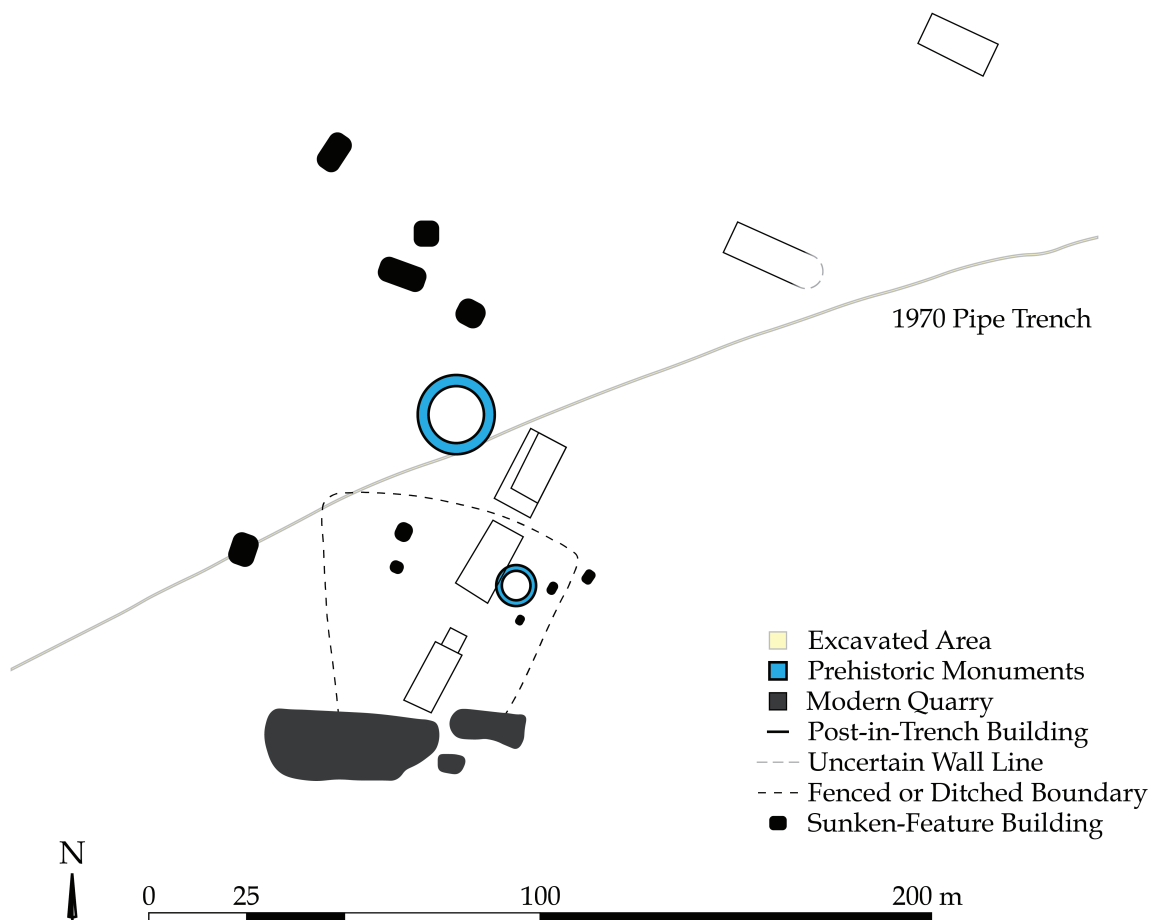

Figure 1.13: The cropmarks at Hatton Rock, bisected by the 1970 pipe trench (redrawn from Hirst and Rahtz 1973; Gethin 2007). One of the largest buildings appears to have had a rounded end wall, possibly indicative of an apse, but this feature is not well-defined in the aerial photographs, and its existence is uncertain.

Figure 1.14: The cropmarks at Milfield (redrawn from Gates and O'Brien 1988) (n.b. the scale of this figure is different from that of the previous figures – the site is simply too extensive to be depicted at the same scale).

# Long Itchington

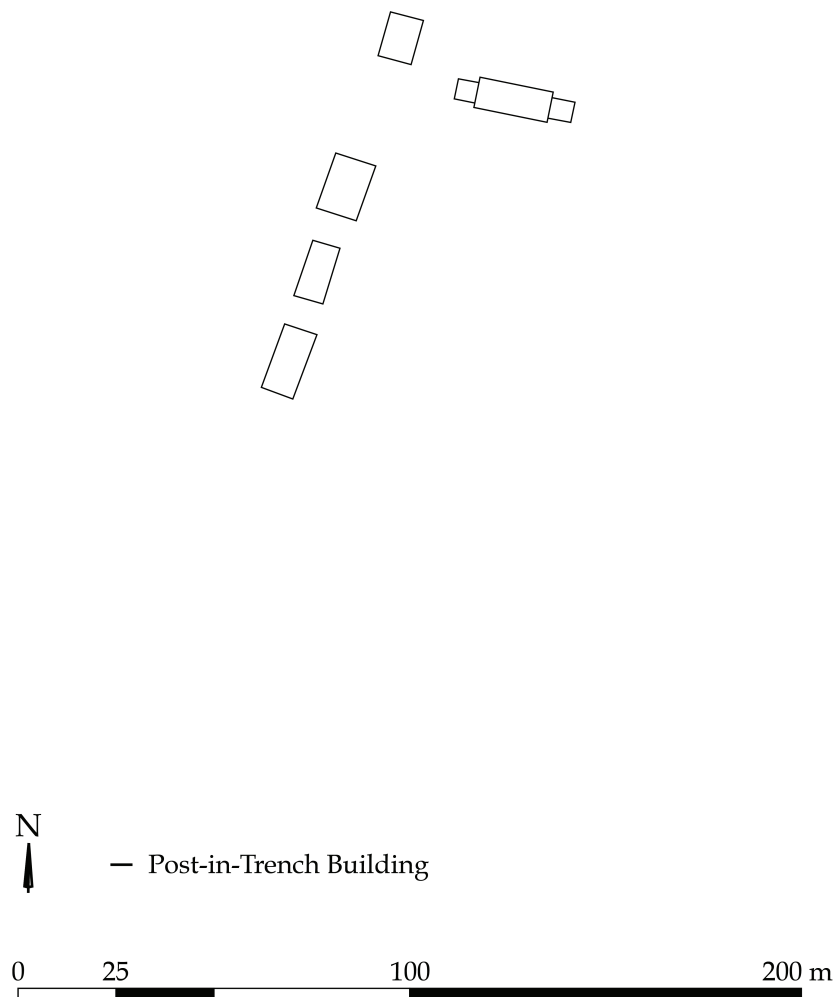

Figure 1.15: The cropmarks at Long Itchington (redrawn from an unpublished plan provided by Abi Tompkins) (n.b. this figure and Figures 1.16-1.22 are depicted at the same scale as Figures 1.4-1.13). Long Itchington is one of the least understood sites, and the only published plan (Wilson 1980) depicts the site as a Roman villa.

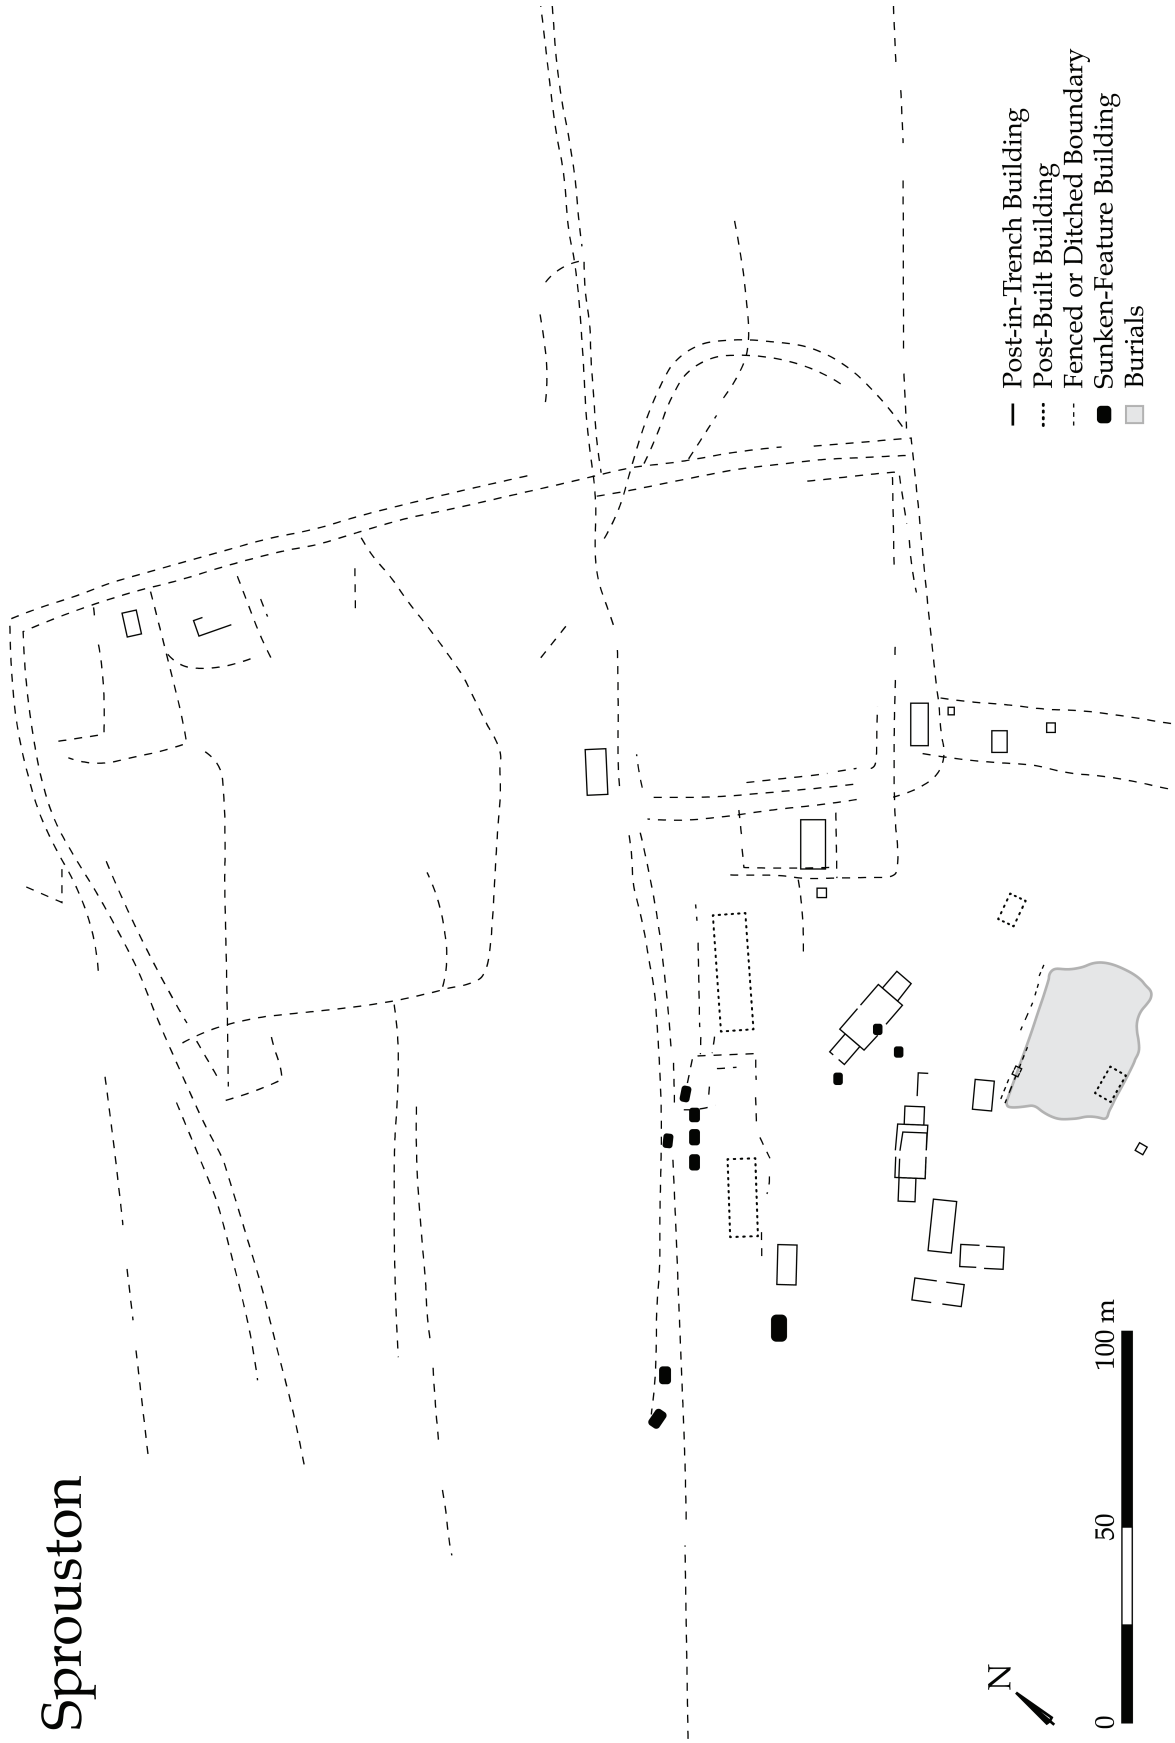

Figure 1.16: The cropmarks at Sprouston (redrawn from Smith 1992).

## Dover

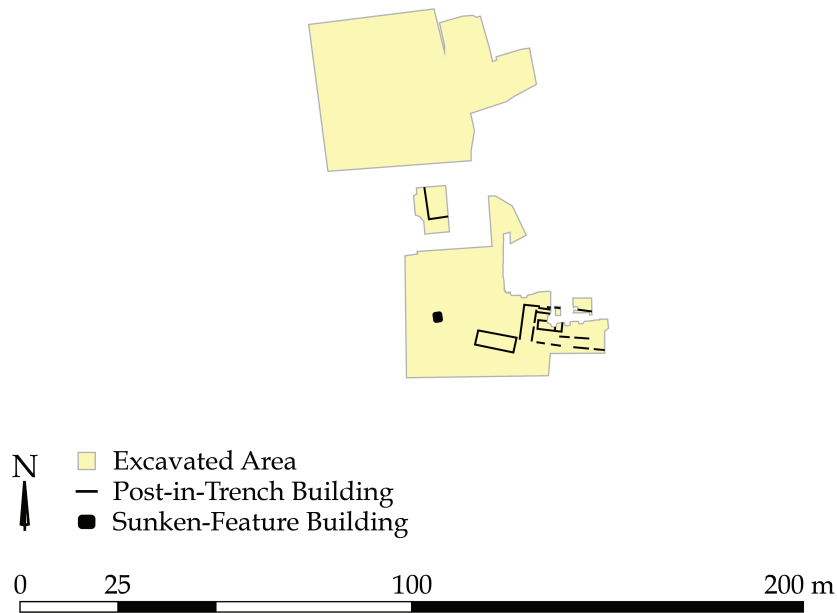

Figure 1.17: The possible great hall complex at Dover (redrawn from Philp 2003). Only the possible sixth- and seventh-century features are depicted in this plan (Due to discrepancies in the published plans, there may be inaccuracies in the placement and orientation of certain features).

## Repton

Figure 1.18: The possible great hall complex at Repton (redrawn from Biddle and Kjølbye-Biddle 2012). The site is unpublished, and the excavated area is unknown. These possible buildings were identified underneath the later minster buildings – nothing else is known.

# Chalton

- Excavated Area
- Post-in-Trench Building
- ⋯ Post-Built Building
- Uncertain Construction Type
- Fence
- Sunken-Feature Building

Figure 1.19: The minor hall complex at Chalton (redrawn from Champion 1977). The site is only partially published, and the construction technique used in most of the buildings is unknown, but the majority were probably post-built buildings, based on the predominance of post-built foundations among the known buildings.

# Polebrook

- Excavated Area
- Post-in-Trench Building
- ⋯ Post-Built Building
- Fence

Figure 1.20: The minor hall complex at Polebrook (redrawn from Upex 2002; 2003; 2004; 2005).

# Thirlings

- Excavated Area
- Post-in-Trench Building
- ⋯ Post-Built Building
- Fence

Figure 1.21: The minor hall complex at Thirlings (redrawn from O'Brien and Miket 1991).

# Lockerbie

- Excavated Area
- Prehistoric Monuments
- Post-in-Trench Building
- ⋯ Post-Built Building

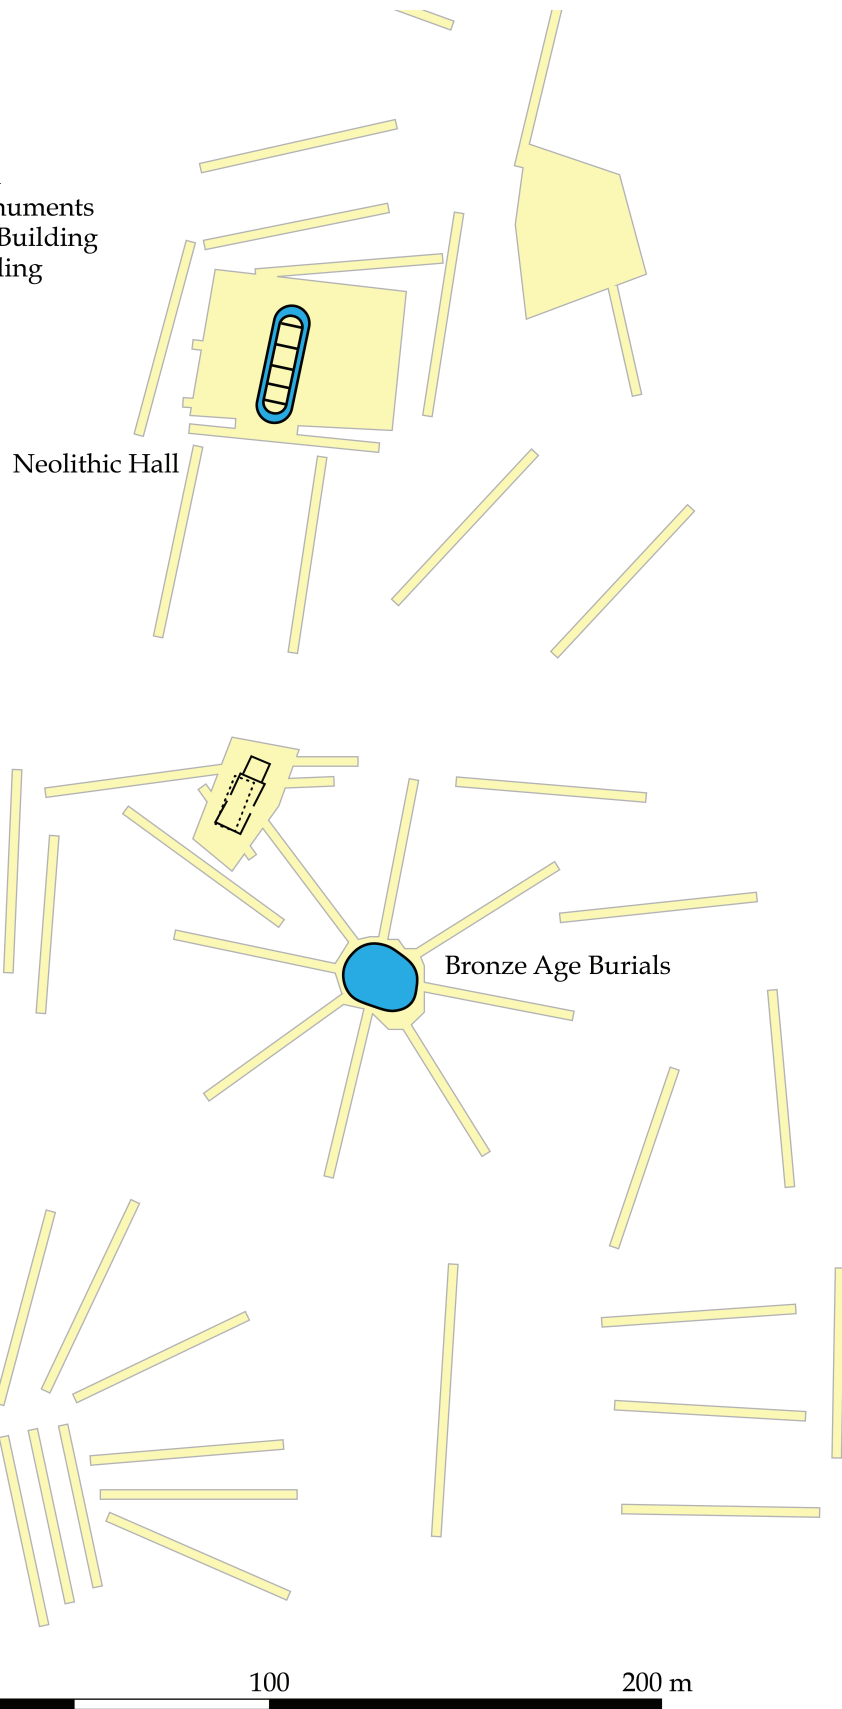

Figure 1.22: The minor hall complex at Lockerbie (redrawn from Kirby 2012).

began under the direction of Brian Hope-Taylor (Figure 1.4).<sup>16</sup>

Hope-Taylor's excavations at Yeavinger were technically brilliant, heralding a new age of English archaeology, but the 'heroic' renaissance-man paradigm of rescue archaeology was not well-suited to post-excavation. The Yeavinger report was published fifteen years after the excavation concluded, and the original draft report was lost.<sup>17</sup> Many details are missing from the final report, certain details are contradictory and the physical archive is in complete disarray.<sup>18</sup>

Nevertheless, Hope-Taylor's excavation dominates the study of great hall complexes. The monumental architecture and meticulously structured layout identified by Hope-Taylor remain the primary identifying characteristics of great hall complexes. The overarching interpretation of Yeavinger – a royal *villa* of peripatetic kings – remains the dominant paradigm for understanding great hall complexes, and the central roles of public assembly and ritual activity have also remained fundamental to the interpretation of great hall complexes.

However, there are significant flaws in Hope-Taylor's interpretation. Approaching Yeavinger from a culture-historical framework, Hope-Taylor sought to explain the emergence, development and abandonment of the site through historical events and cultural conflict between British, Germanic and Irish influences.<sup>19</sup> To Hope-Taylor, Yeavinger originated as a British 'folk-centre', and the emergence of the great hall complex was attributed to the arrival of Anglo-Saxons, while the episodes of burning were attributed to the historical campaigns of Penda and Cadwallon, and the later architectural development of the site was attributed to the Irish influences of King Oswald.<sup>20</sup> This approach places immense strain on the fragmentary historical record, but more fundamentally, this approach fails to adequately explain the underlying mechanisms of change.<sup>21</sup> Why were the great halls built, what role did this new monumentality play in the wider society and why did the architectural style change over time? Hope-Taylor does not directly address these questions.

Nevertheless, Hope-Taylor's culture-historical approach has had a substantial impact on the discipline. Soon after the Yeavinger excavations concluded, Brian Hope-Taylor excavated the site at Doon Hill in 1964-

1966. Paralleling and no doubt contributing to his interpretation of Yeavinger, Hope-Taylor identified an Anglo-Saxon great hall superimposed onto a British great hall.<sup>22</sup> However, the excavation was never fully published, and both the 'British' hall and the 'Anglo-Saxon' hall have now been radiocarbon dated to the Neolithic.<sup>23</sup> Nevertheless, for several decades, the site was believed to be conclusive evidence that certain Northumbrian great hall complexes had British antecedents.<sup>24</sup>

This emphasis on British influences – also seen in the interpretation of Atcham, which was identified from aerial photographs in 1975<sup>25</sup> – was part of a larger trend challenging the impact of Germanic migrations in Anglo-Saxon archaeology.<sup>26</sup> However, as more Anglo-Saxon settlements were excavated, a well-defined Anglo-Saxon building tradition began to take shape, and the great halls began to look increasingly at home among Anglo-Saxon architecture. Soon after the Yeavinger report was published, Roger Milet and Philip Rahtz expressed doubts about British influences in the Yeavinger buildings, and following the excavation of Cowdery's Down, James *et al.* convincingly argued that the great halls shared fundamental similarities with the Anglo-Saxon building tradition (Figure 1.23).<sup>27</sup> Chris Scull further argued that the earliest buildings at Yeavinger, predating the great hall complex, were also characteristically Anglo-Saxon, suggesting that the origins of Yeavinger lay in a typical Anglo-Saxon settlement, rather than a British 'folk-centre'.<sup>28</sup>

### 1.2.2 Cowdery's Down and the Growing Influence of Processual and Post-Processual Archaeology

The excavation of Cowdery's Down in 1978-1981 (Figure 1.5) and the subsequent metrical analysis of the Anglo-Saxon building tradition marked the conspicuous advent of processual archaeology in the study of great hall complexes.<sup>29</sup>

The excavation report for Cowdery's Down could hardly be more different from the excavation report for Yeavinger. The Cowdery's Down report focused on the form and construction of the buildings, and little attention was given to written sources. The excavators identified Cowdery's Down and Yeavinger as high

<sup>16</sup> Hope-Taylor 1977.

<sup>23</sup> Ralston 2018; 2019.

<sup>24</sup> Cf. Reynolds 1980; Alcock 1988; 2003; Smith 1992: 267-9; Blair 2018: 38, 115; Ian Ralston 2018; 2019.

<sup>25</sup> Rahtz 1975; 1976a; St Joseph 1975.

<sup>26</sup> Cf. Dixon 1982; see Hamerow 2012: 18-9 for a brief discussion.

<sup>27</sup> Milet 1980; Rahtz 1980; James *et al.* 1984.

<sup>28</sup> Scull 1991.

<sup>29</sup> For Cowdery's Down, see Millett and James 1983. For the Anglo-Saxon building tradition, see James *et al.* 1984. The structural interpretation of Cowdery's Down was later reconsidered by Alcock and Walsh 1993.

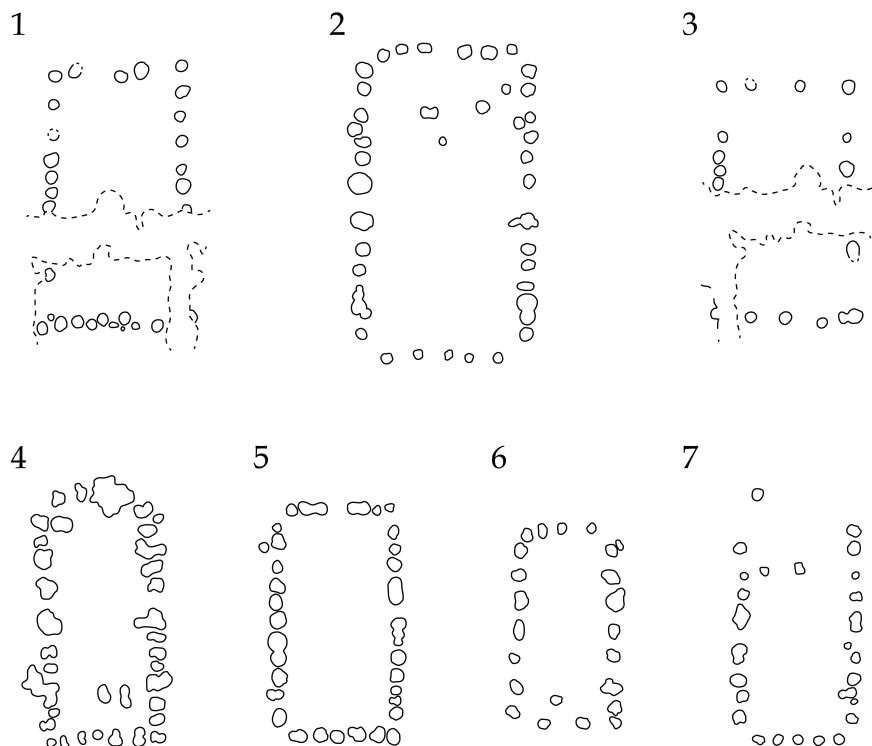

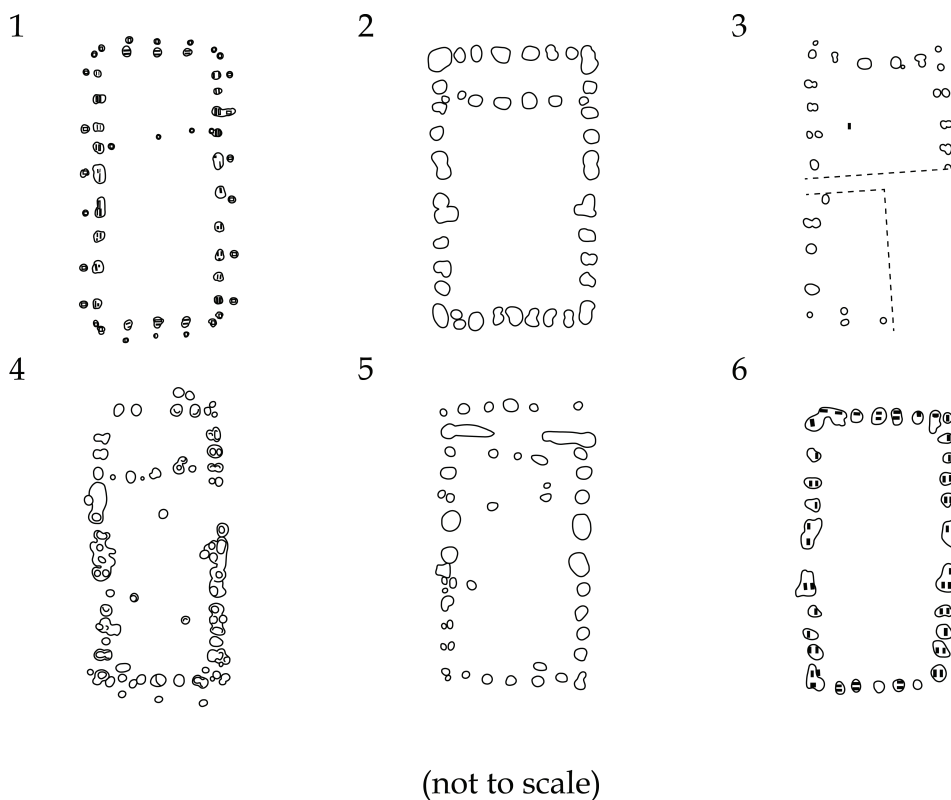

Figure 1.23: Above, the buildings at Cowdery’s Down compared with other Anglo-Saxon buildings: 1. Cowdery’s Down B4, 2. Chalton A20, 3. Bishopstone XXVIII, 4. West Stow 2, 5. Mucking, 6. Thirlings G (redrawn from James *et al.* 1984: figure 9). Below, the early buildings at Yeavinger compared with other Anglo-Saxon buildings: 1. Yeavinger A6, 2. Mucking, 3. Yeavinger A7, 4. West Heslerton, 5. West Stow, 6. Barrow Hills, 7. Spong Hill (redrawn from Scull 1991: figure 4).

status sites because the great halls were statistical outliers among excavated Anglo-Saxon buildings.<sup>30</sup> Whereas Yeavinger was linked to historical kings, Cowdery's Down was cast in the processual terminology of 'chieftains'. This independent interpretation of the archaeological evidence was an important shift in the study of great hall complexes. However, as a result, the Cowdery's Down report was predominantly concerned with architectural details, and the broader interpretation – the functions and purpose of the site – was left largely unexplored.

The processual approach was also showcased in a series of articles debating the standardized measurements used in the construction of Yeavinger, but written sources and themes of cultural conflict remained central to the discipline.<sup>31</sup> Leslie Alcock argued that many Northumbrian high status sites appropriated earlier British power centres, based primarily on documentary and toponymic sources.<sup>32</sup> Alcock disputed the connection between the Yeavinger conflagrations and the historical campaigns of Penda and Cadwallon, but Alcock's alternative explanations were nevertheless firmly rooted in the written sources.<sup>33</sup> Back-projecting from later sources, Alcock also expanded upon Hope-Taylor's interpretation of great hall complexes as royal estate centres, raising questions about the economic functions of great hall complexes and suggesting that the great halls may in fact be barns.<sup>34</sup> This suggestion – that great halls might actually be barns – has found little support among other scholars, but the broader question of economic functions and agricultural processing facilities is an important one.<sup>35</sup>

Meanwhile, Richard Bradley's 1987 article on the appropriation of prehistoric monuments at Yeavinger heralded the first impact of post-processual archaeology in the study of great hall complexes.<sup>36</sup> However, while this article was influential, post-processual interpretations remained rare in the study of great hall complexes. When the excavators of Yeavinger Henge discovered evidence for in situ Anglo-Saxon metalworking cut into a prehistoric monument, they dismissed the possibility that this might represent a deliberate act of appropriation.<sup>37</sup> It was not until 1999 that Paul Frodsham suggested connections between elite metalworking and the supernatural powers of prehistoric monuments.<sup>38</sup> Nevertheless, this theme of supernatural power and the creation of special objects

at great hall complexes remains underdeveloped. Similarly, Andrew Reynolds has suggested that the symmetrical layout of great hall complexes is indicative of ritually organized space, but what exactly this means and its implications for the functions of great hall complexes remains underexplored.<sup>39</sup>

Meanwhile, the identification of great hall complexes at Hatton Rock, Sprouston, Sutton Courtenay, Long Wittenham and Cowage Farm as well as the excavation of Yeavinger Henge and the reinterpretation of the Milfield cropmarks had relatively little impact on the field.<sup>40</sup> The primary focus remained on Hope-Taylor's excavations at Yeavinger and Martin Millett's excavations at Cowdery's Down.

The enclosures and droveways identified at Sprouston (Figure 1.17) and the evidence for metalworking recovered from Yeavinger Henge provided particularly important evidence for the economic functions of great hall complexes, but the impact of these discoveries was marginal; Leslie Alcock failed to mention either site in his discussion of economic functions.<sup>41</sup>

### 1.2.3 Great Hall Complexes in the 21st Century

The new millennium heralded a new phase in the study of great hall complexes. The 2001-2003 excavation at Sutton Courtenay was the first new excavation at a great hall complex in twenty years, and in conjunction with E.T. Leeds' settlement excavations at Sutton Courtenay in the 1920-1930s, this provided the first concrete evidence for more typical Anglo-Saxon settlement at great hall complexes.<sup>42</sup> Meanwhile, amateur metal-detecting at Sutton Courtenay also provided the first evidence for high status metalworking and early eighth-century exchange at great hall complexes.<sup>43</sup>

Soon afterward, John Blair's *The Church in Anglo-Saxon Society* provided one of the first overarching interpretations of great hall complexes that was not back-projected from later sources; although Blair's conclusions were based in part on written sources, his treatment of the sources was significantly more critical than that of Hope-Taylor or Alcock. Instead of back-projecting royal estate centres, Blair argued that royal activity was largely unstable before c. 800 AD and great

hall complexes were instead part of a shifting landscape of enduring royal interests.<sup>44</sup>

In the same year, *Yeavinger: People, Power & Place* brought together a range of perspectives to reconsider the site at Yeavinger, and although there was some support for Hope-Taylor's views, in general, this volume represented a concerted shift away from the culture-history that had continued to plague the study of Yeavinger. Carolyn Ware's contribution, in particular, represented the first explicit and informed post-processual interpretation of Anglo-Saxon great halls, suggesting that the great halls had a fundamental role to play in reshaping social structures and mediating the transition from local chiefs to established royal dynasties.<sup>45</sup> This post-processual approach was also later explored by Jenny Walker, although it has gone largely unnoticed.<sup>46</sup> Meanwhile, Paul Barnwell's article comparing Yeavinger's theatre to provincial Roman theatres and Yeavinger's standing posts to the Frankish *staffolus* was also an important contribution to understanding the creation of power at great hall complexes.<sup>47</sup>

More recently, the theme of cultural conflict has been recast and reinvigorated by John Blair, who has argued that Anglo-Saxon monumentality, both great hall complexes and princely burials, emerged out of a broad 'middle zone', which emerged around the fringes of the more economically developed, more populous and more dynamic 'eastern zone' (Figure 1.24).<sup>48</sup> Ostensibly, this middle zone lies between the Anglian east and the British west, and Blair argues that this area displays a mix of Anglo-Saxon and British cultural traits, but this hypothesis also moves beyond the British/Anglo-Saxon dichotomy, proposing that great hall complexes developed out of a broader social, political and economic package, which would also produce many of the largest and most powerful kingdoms.

Meanwhile, the recently discovered sites at Lydinge and Rendlesham were the first great hall complexes to produce truly exceptional material culture assemblages. Lydinge and Rendlesham produced staggering evidence of high status craft-working and exchange, and the presence of high status fifth- and sixth-century material provided the first evidence that great hall complexes may have been important centres prior to the construction of the great halls.

The scale of the Rendlesham project also reflects a growing interest in the wider activity surrounding great hall complexes, and this interest in wider activity was also reflected in the Origins of Wessex pilot project, set in the regional hinterland of Sutton Courtenay and Long Wittenham.<sup>49</sup> However, the structure and extent of Blair's shifting royal landscapes and the place of great hall complexes in regional settlement networks remain underexplored.

Meanwhile, the discovery and excavation of two new sites at Lockerbie and Eynsford went largely unnoticed; the excavators did not make efforts to disseminate the results, and in each case, the excavators appear to have been relatively unfamiliar with the study of great hall complexes.<sup>50</sup>

#### 1.2.4 Key Themes and Unanswered Questions

The study of great hall complexes prior to the excavation of Sutton Courtenay can be understood in terms of two excavations: Yeavinger and Cowdery's Down. Yeavinger defined the discipline; it is inevitably the first site to be cited, and it continues to exert significant influence over the study of great hall complexes. However, Hope-Taylor's reliance on written sources and his emphasis on cultural conflict have been detrimental to understanding the underlying processes driving the emergence, development and obsolescence of great hall complexes. The processual approach at Cowdery's Down represented a stark rebuttal of Hope-Taylor's interpretation. However, the Cowdery's Down report was primarily descriptive, and like the Yeavinger report, the Cowdery's Down report failed to provide meaningful conclusions about the underlying processes driving the great hall complex phenomenon.

The excavation of Sutton Courtenay heralded a new phase of investigation and a diversification of interpretative approaches. Sutton Courtenay, Lydinge and Rendlesham provided new evidence of economic complexity, sixth-century antecedents and eighth-century continuity. John Blair, Carolyn Ware and Jenny Walker advanced stimulating interpretations of great hall complexes from opposite ends of the spectrum, shining new light on the historical and archaeological evidence.<sup>51</sup> Nevertheless, there remain significant gaps in the study of great hall complexes.

The dominant medium of scholarship continues to be excavation reports, and as a result, there is a conspicuous lack of comparative analysis and 'big picture' interpretations. A comprehensive comparative

analysis of great hall complexes is required to address these issues.

The regional context of great hall complexes also remains underexplored. Great hall complexes are often depicted as places of public assembly, where power relationships between rulers and subjects were created and reinforced, but the relationship between great hall complexes and wider society is poorly understood.<sup>52</sup> A regional study of great hall complexes is therefore needed to understand the place of great hall complexes within regional systems.

There also remains a general lack of explicitly theoretical interpretations. The majority of scholarship on great hall complexes continues to be primarily descriptive, rather than interpretative. In this respect, the study of Anglo-Saxon great hall complexes should take inspiration from the study of Scandinavian 'central places', which has been more receptive to post-processual archaeology and cultural anthropology.<sup>53</sup>

Ultimately, the most significant deficit in the study of great hall complexes is a failure to answer *why* great hall complexes were built. The emergence of great hall complexes was not a foregone conclusion. Each aspect of a great hall complex was developed, adopted, adapted and then eventually abandoned by agents acting under conscious and unconscious motivations. This process cannot be taken for granted; it must be explained.

These gaps in the existing scholarship are therefore the starting point for this book.

### 1.3 Great Hall Complexes in Comparison and in Context

The primary aim of this book is to explain why great hall complexes were built, why and how they developed over time and why they were abandoned.

This is accomplished through two avenues of research – a broad comparative study of all great hall complexes and a regional case study of great hall complexes in context – and the book is correspondingly divided into two parts: Part I (Chapters 2-3) and Part II (Chapters 4-8).

Part I begins with Chapter 2, which compares and contrasts the known sites, analysing the basic characteristics of great hall complexes and the evidence for their functions. Chapter 3 then considers the overall development of great hall complexes, directly

addressing the primary aims of this book – why great hall complexes were built, why and how they developed over time and why they were abandoned.

Part II then explores the wider context of great hall complexes with a regional case study, analysing the development of socio-economic power in the burials and settlements of the Upper Thames Valley, before situating the great hall complexes within this development. First, Chapters 4-5 lay the groundwork, analysing the development of socio-economic power through the distribution of burials and burial wealth. Chapters 6-7 then analyse the development of socio-economic power through the distribution of settlement activity and high status settlements. Finally, Chapter 8 brings together the conclusions from Chapters 4-7 and Chapters 2-3 to explore the overall development of socio-economic power in the Upper Thames Valley and the role of great hall complexes in this development.
