An Island through Time: Surface Survey and Selective Occupation on Strongylo (Antiparos)

Evan I. Levine, Hüseyin Ç. Öztürk, Alex R. Knodell, Denitsa Nenova, John F. Cherry, Demetrios Athanasoulis, Zozi Papadopoulou, Žarko Tankosić

Figure 1:	Parian archipelago with islands surveyed by SCIP highlighted in orange (Strongylo at southwest). Notable archaeological sites or areas of interest labelled in italics. Map by E. Levine	2
Figure 2:	Strongylo intensive study area and SCIP daily fieldwork methodology. Map by E. Levine.....	4
Figure 3:	Features documented on Strongylo including both in-person documentation (black with feature numbers) and subsequent lidar-derived feature documentation (red, unnumbered). Map by E. Levine	5
Figure 4:	Lidar analysis, highlighting the difference between drone-based photogrammetry digital elevation model (left), lidar-based digital surface models (centre), and lidar-based digital terrain models (right) that offer the opportunity to remove vegetation cover, easing the identification and documentation of landscape modifications such as terracing and check-dams on Strongylo (all datasets visualised as hillshades to aid comparison). Maps by E. Levine.....	6
Figure 5:	Strongylo survey units with pottery counts (orange), lithics (black points), features (red lines), and areas of gridded collection. Map by E. Levine.....	8
Figure 6:	Obsidian artefacts from Strongylo: a–e) projectile points; f–h) fragments of prismatic blade cores, reduced by bipolar percussion; i) frontal miniature flake core. Drawings by J. F. Cherry.....	9
Figure 7:	a) Early Cycladic pottery heat map and obsidian find points across Strongylo; b) Distribution of 1st-millennium BCE ceramics in sub-phases: Geometric (red dots), Archaic/Classical (light blue dots), Hellenistic (yellow dots), Hellenistic/Early Roman (brown dots); c) Roman ceramics (red dots); d) Byzantine (pink dots) and post-Byzantine (blue dots) ceramics. Maps by D. Nenova	10
Figure 8:	Select pottery collected from Strongylo; a–b) Neolithic; c–f) Early Cycladic; g–h) Middle Cycladic; i) Late Cycladic; j) Geometric; k) Archaic; l–p) Classical-Hellenistic; q–u) Roman; v–w) Byzantine; x) Venetian; y–z) 19th and 20th century CE. Plate and drawings by D. Nenova	11
Figure 9:	F001, remains of a tower at central peak and highest point (183 m) on Strongylo. Figure by L. Rodríguez-Pérez	15
Figure 10:	Orthomosaic (left) and DEM (right) of F021, a large structure on the northwest coast of Strongylo. Photograph taken facing north, highlighting vegetation cover and state of preservation (crouching Features Team member for scale). Figure by E. Levine and H. Ç. Öztürk	16
Figure 11:	Plan of Aghios Georgios with Premodern and Early Modern architectural features indicated. Figure by E. Levine and H. Ç. Öztürk.....	18
Figure 12:	Unfluted monolithic column found underwater, just east of the site of Aghios Georgios. Likely spoliated from the Archaic sanctuary of Mandra on Despotiko. Photo by H. Indgjerd	19
Figure 13:	Byzantine agro-pastoral complexes. Orthomosaics of (a) F006 and (b) F002. Figure by E. Levine and H. Ç. Öztürk.....	20
Figure 14:	The Parian archipelago, as depicted in Bartolommeo dalli Sonetti's <i>Isolario</i> (Venice, 1485). Annotations added in ink after printing, based on accompanying sonnet. Strongylo labelled as <i>irochi</i> (Boston Public Library, Q.405.128)	22
Figure 15:	Masonry styles of terrace walls F004 (top left), F018 (top right), F048 (middle left), F022 (middle right), and check-dams F019 (bottom left) and F017 (bottom right). Figure by H. Ç. Öztürk	27

Social Strategies for Dealing with Scarce Precipitation: Examples from the Iron Age Cyclades

Doug Forsyth

Table 1:	Rainfall per Year in Millimeters for Selected Greek Locations	33
Figure 1:	Map of Central Hawai'ian Islands (prepared by Hallvard Indgjerd).....	34
Table 2:	Eastern Mediterranean Islands: Earliest Colonization Data Post Last Glacial Maximum	36
Figure 2:	Southern Aegean Islands (prepared by Hallvard Indgjerd)	37
Table 3:	<i>Phoros</i> and land area of Cycladic islands	39
Figure 3:	Aerial view of water collection system at Despotiko (photo courtesy Yannis Kourayos)	43
Figure 4:	Lower square cistern, 2022 Excavation (photo courtesy Yannis Kourayos).....	44
Figure 5:	Channel and regulating nozzle from upper cistern (author's photo).....	45
Figure 6:	Upper circular cistern with rock scatter and southern/uphill water entrance to system (author's photo)	46
Figure 7:	Looking south to rainfall collection area between two hills just above collection system, two settling ponds in foreground (author's photo)	47

Resilience and Vulnerability of a Greek Colony on a Small Adriatic Island: The Case Study of Issa on Vis on the Croatian Coast of Dalmatia (4th – 1st Centuries BCE)

Lilian de Angelo Laký

Figure 1: Issa, Vis and important sites in Central Dalmatia (Google Earth with modifications by the author)	55
Figure 2: Fertile fields in Vis (after Zaninović 2002)	55
Figure 3: The location of Issa in the city of Vis (author's photo, 2021)	57
Figure 4: Urban plan of Issa (after Kirigin 1990)	58
Figure 5: Hillforts on Vis and Thiessen polygon (after Forenbaher <i>et al.</i> 1994)	59
Figure 6: Plan of Sveti Duh hillfort (after Kirigin <i>et al.</i> 2006b)	59
Figure 7: Plan of Grodac hillfort (after Kirigin <i>et al.</i> 2006b)	60
Figure 8: Plan of Sveti Vid hillfort (after Kirigin <i>et al.</i> 2006b)	60
Figure 9: Plan of Štracine hillfort (after Kirigin <i>et al.</i> 2006b)	61
Figure 10: Plan of Talež hillfort (after Kirigin <i>et al.</i> 2006b)	62
Figure 11: Vis, southern coast from Kopačina (author's photo, 2021)	63
Figure 12: Tumuli of Vela Gomila (author's photo, 2021)	63
Figure 13: Greek land division as suggested by Zaninović (after Zaninović 2002)	65
Figure 14: View of Dračevo polje (author's photo, 2021)	65
Figure 15: Sub-colonies of Issa in Central Dalmatia (Google Earth with modifications by the author)	67

Nearshore Islands as Resilient Cultural Landscape Among Shellmound Building Societies on the Southern Shores of Brazil

Henrique Kozłowski and Paulo DeBlasis

Figure 1: Sambaqui clustering areas along the Brazilian shoreline. In detail, the Santa Marta area examined in this paper	72
Figure 2: Sambaquis from the southern Brazilian coast (photos)	73
Figure 3: Chronology and distribution of the sambaquis from the Santa Marta area (after DeBlasis <i>et al.</i> 2021, fig. 6)	78
Figure 4: Cumulative viewshed of the sambaquis from the Santa Marta palaeobay area	80
Figure 5: Intervisibility network of sites in the Santa Marta area – 20 km viewshed radius	81
Figure 6: Intervisibility network of sites in the Santa Marta area – 11.5 km viewshed radius	82

Community Participation in Response to Environmental Challenges in the Caribbean: A Dialogue Between Archaeology and Local Knowledge

Andrea Richards and Harold Kelly

Figure 1: Map of the Caribbean archipelago (Menno Hoogland)	87
Figure 2: Structural solution used to protect coastal areas in Barbados (Andrea Richards, 2022)	90
Figure 3: Reconstructions of settlement locations in response to coastal changes at Anse à la Gourde, Guadeloupe (left), and evidence of how post holes were anchored deeply to respond to severe wind action/sheer – tropical cyclones (right) (Menno Hoogland, after Hofman <i>et al.</i> 2021)	91
Figure 4: Sardo Sutherland (Kalinago Saint Vincent) and Irvince Nanichi Auguiste (Kalinago territory Dominica) collaborating in rescue archaeology at the eroding Brighton Beach pre-Columbian site in Saint Vincent (Corinne Hofman, 2019)	92
Figure 5: Collaboration with local community members in the vulnerability assessment of the eroding Winthorpe pre-Columbian site in Antigua (Andrea Richards, 2022)	93
Figure 6: Arashi shell midden archaeological site impacted by storm events and erosion (© National Archaeological Museum Aruba, 2022)	95
Figure 7: Participants during the Aruba workshop, November 2022 (Menno Hoogland)	96

Acknowledgements

We would like to express our sincere gratitude to the entire Archaeopress team for their invaluable support throughout the preparation of this volume. We are especially grateful to Mike Schurer, Erin McGowan, and Danko Josic for their professionalism, guidance, and assistance at every stage of the publication process.

Our special thanks go to Yannis Kourayos for generously granting permission to use the aerial photograph of the islet of Tsimintiri for the cover of this volume. We are equally grateful to Kornillia Daifa for kindly and efficiently arranging the image and making it promptly available to us.
